Instructions to Candidates.

1. Write your name, Index Number and School in the spaces provided above.
2. Sign and write the date of the examination in the spaces provided above.
3. Answer all the questions in the spaces provided.

FOR EXAMINER’S USE ONLY

QUESTION	MAXIMUM SCORE	CANDIDATE’S SCORE
1-29	80	

QUESTIONS

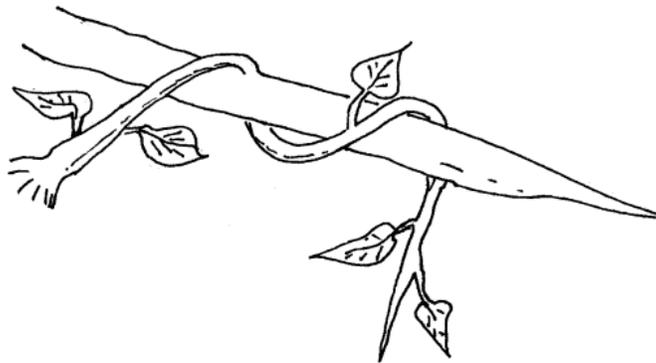

1. State the organelles that perform the following functions (3mks)
- i) Synthesis of ribosomes
 - ii) Transport of lipids
 - iii) Package and transport of glycol-proteins
2. During a strenuous exercise, the chemical process represented by the equation below takes place in human muscles.

Glucose

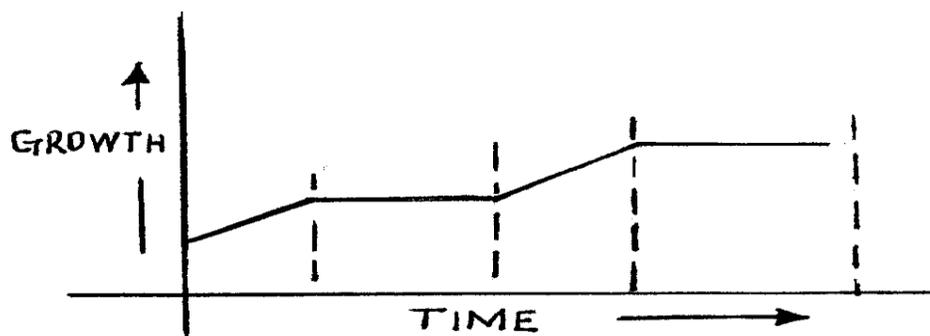

Substance X

- a) What is the name of this process (1mk)
 - b) Name the substance X (1mk)
 - c) What happens to the muscles if X accumulate to critical levels (1mk)
3. A response exhibited by a certain plant tendril is illustrated below.

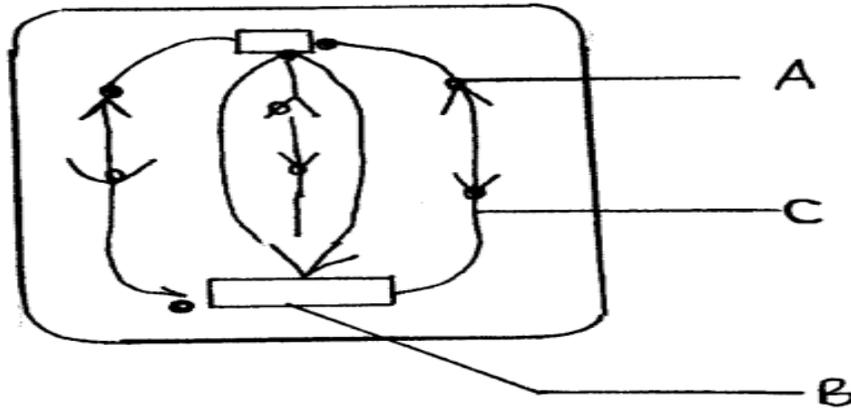

- a) Name the type of response (1mk)
 - b) Name the type of plants that uses the named response in (a) above for support (1mk)
4. Explain what would happen to the following cells transferred from their normal condition into distilled water
- a) Amoeba (2mks)
 - b) A plant parenchyma cell (2mks)
5.
 - a) Name the structure in the body that detects changes in internal temperature (1mk)
 - b) State two physiological changes that occur in human body when internal temperature tends to drop below normal (2mks)
6. Explain how the following factors affect the rate of transpiration.
- i) Sunken stomata (2mks)

- ii) Light intensity (2mks)
7. State the function of cardiac sphincter in the stomach (2mks)
8. a) What is meant by the term sex-linked genes? (1mk)
 b) Give an example of a sex linked trait in humans on Y – chromosome (2mks)
 X – chromosome
9. Name three processes in living things that depend on diffusion. (3mks)
10. a) State the difference between ball and socket joint and the hinge joint (1mk)
 b) Name the structures that join bones together to form a joint (1mk)
 c) Name the structures at the elbow that performs the same function as the patella (1mk)
11. State the function of each of the following parts of the human ear. (3mks)
 a) Ear ossicles
 b) Cochlea
 c) Semi-circular canals
12. List two advantages of staining cells and tissues before observing them under the microscope (2mks)
13. Of what importance is Luteinising hormone in male reproductive system (1mk)
14. The graph shows a growth curve of insects.

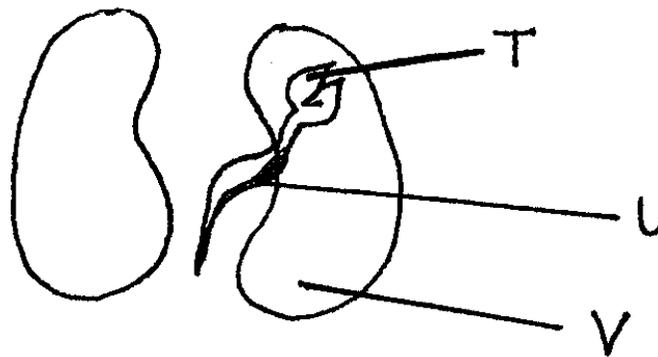

- a) State one feature that is responsible for the pattern of growth shown by insect (1mk)
 b) How do insects overcome the limitation so that growth occurs after all (1mk)
15. What are the structural units of lipids? (2mks)
16. State the importance of the following features in gaseous exchange (2mks)
 a) Presence of cartilage in trachea and bronchi
 b) Alveoli, gill filaments, tracheoles being numerous in the respective organisms where they occur
17. a) State the major factor in the ‘Global warming’ experienced in the world today (1mk)
 b) Suggest two ways of reducing the Global warming (2mks)

18. The diagram shows an epidermal cell undergoing mitotic cell division.

- i) Name the stage of mitosis it represents (1mk)
- ii) Name the structures A (1mk)
- C (1mk)

19. The diagram shows a bean seed split open.

- a) Label the parts
- b) Of what importance is structure U to the bean plant? (2mks)

20. In an investigation, a group of students came across animals living in the following habitats.

What was the likely main nitrogenous waste product of each in its habitat (3mks)

Habitat	Nitrogenous waste
Terrestrial	
Fresh water	
Marine	

- 21. a) Name the organism that causes malaria (1mk)
- b) Name two ways of preventing this disease (2mks)

TRIAL 1 PAPER 2

2 HOURS

NAME..... INDEX NO.....

SCHOOL..... SIGN.....

DATE.....

INSTRUCTIONS TO CANDIDATES.

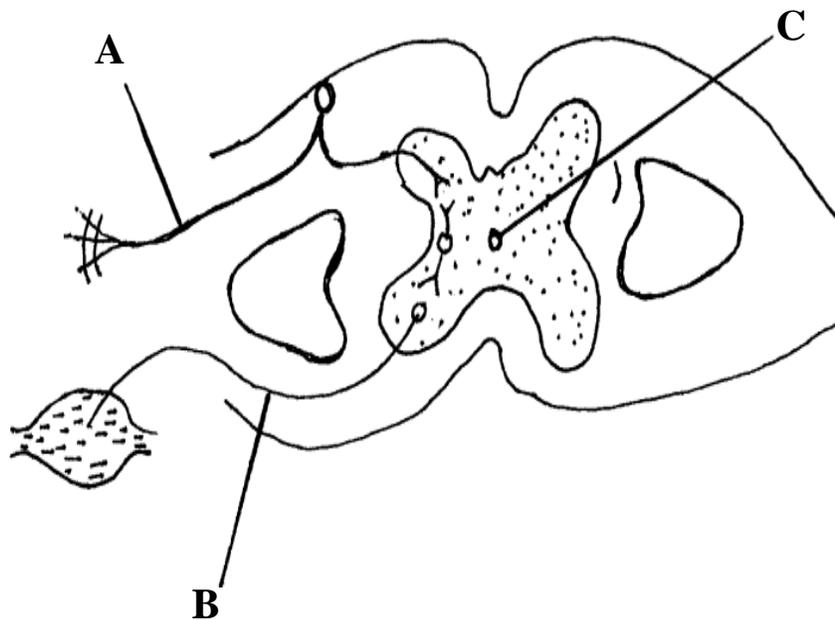

- Write your name, Index Number and School in the spaces provided above.
- Sign and write the date of the examination in the spaces provided above.
- This paper consists of **TWO** sections A and B
- Answer **ALL** questions in section A, In section B answer question 6 (**compulsory**) and either question 7 or 8 in the spaces provided after question 8.

For Examiner's Use Only

SECTION	QUESTION	MAX SCORE	SCORE
A	1	8	
	2	8	
	3	8	
	4	8	
	5	8	
B	6	20	
	7	20	
	8	20	
	TOTAL	80	

SECTION A: (40MARKS)

1.
 - a) State three structural differences between arteries and veins (3mks)
 - b) List two factors that aid in blood flow through the veins (2mks)
 - c) Name the proteins in the blood which are responsible for determining the blood group of a person (2mks)
 - d) In a certain person, blood took long time to clot after a cut. What vitamin deficiency was the person likely to have been suffering from? (1mk)
2.
 - a) What is carbon dioxide fixation in photosynthesis? (3mks)
 - b) Explain how oxygen is formed in the process of photosynthesis (4mks)
 - c) Other than carbon (IV) oxide, name another raw material for photosynthesis (1mk)
3. Below is a cross section of the human spinal cord.

- a) Name the parts labeled A and B (2mks)
 - b) State the function of the part labeled C (1mk)
 - c) Describe the reflex arc when a bare footed man steps on a sharp pin (5mks)
4.
 - a) Name two disorders in humans caused by gene mutations (2mks)
 - b) What is meant by the term allele? (1mk)
 - c) In a particular species of tropical beetle, the wings had either red or orange marks. A cross between a red marked beetle with orange marked beetle produces offsprings with yellow marks only. When F1 offsprings were selfed, they produced F2 generation in the ratio of 1 red : 2 yellow : 1 orange

- i) Explain the absence of red and orange marks in F1 offspring's **(1mk)**
 - ii) Using a punnet square, show how the F2 generation was crossed. (Use letters R for red marks and W for Orange marks) **(4mks)**
5. a) Describe the three characteristics of a population **(3mks)**
- b) The table below gives information about an aquarium community which is ecologically balanced.

Type of organism	Weight in grams
Insect larvae	500g
Fishes	1,200g
Water Plants	5000g
Bacteria	10g

- i) What do you understand by the term ecological balanced? **(1mk)**
- ii) Construct a pyramid of biomass from the above data **(3mks)**
- iii) Briefly describe the shape of the pyramid of biomass **(1mk)**

SECTION B (40 MARKS)

Answer question 6 (Compulsory) and either question 7 or 8 in the spaces provided question 8

6. The table below shows the rate of enzyme activity at different pH values.

pH	Rate of Product formation (mg/hr)
1	8.0
2	10.0
3	10.0
4	6.0
5	3.3
6	2.0
7	1.0
8	0.3
9	0.0
10	0.0

- a)** Using a suitable scale, draw a graph of the rate of product formation against pH **(6mks)**
- b)** Account for the rate of product formation between
- i)** pH 1 and 3 **(2mks)**
- ii)** pH 5 and 8 **(2ms)**
- iii)** pH 9 and 10 **(2mks)**
- c)** What is the optimum pH value for this enzyme **(1mk)**
- d)** Suppose this enzyme is a digestive in what part of the alimentary canal would it be found **(1mk)**
- i)** Give a reason for your answer **(2mks)**
- e)** Apart from the pH, state four other factors that may affect the rate of enzyme activities **(4mks)**
- 7. a)** Describe how insect pollinated flowers are adapted to pollination **(10mks)**
- b)** Explain how seeds and fruits are adapted to wind and animal dispersal **(10mks)**
- 8.** Explain how a finned fish is adapted to locomotion in water **(20mks)**

TRIAL 2 PAPER 1

2 HOURS

NAME..... INDEX NO.....

SCHOOL..... SIGN.....

DATE.....

Instructions to Candidates.

- Write your name, Index Number and School in the spaces provided above.
- Sign and write the date of the examination in the spaces provided above.
- Answer all the questions in the spaces provided.

FOR EXAMINER'S USE ONLY

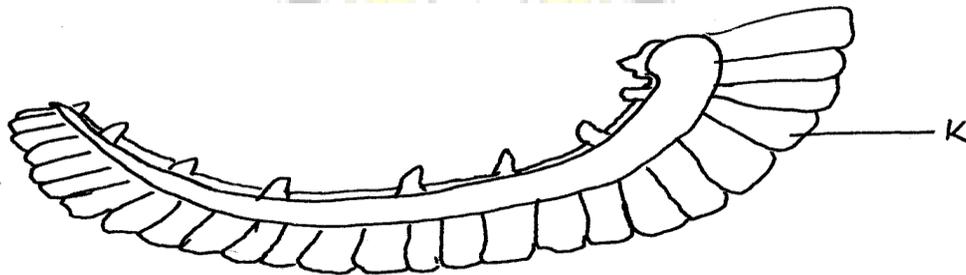

QUESTION	MAXIMUM SCORE	CANDIDATE'S SCORE
1-30	80	

QUESTIONS

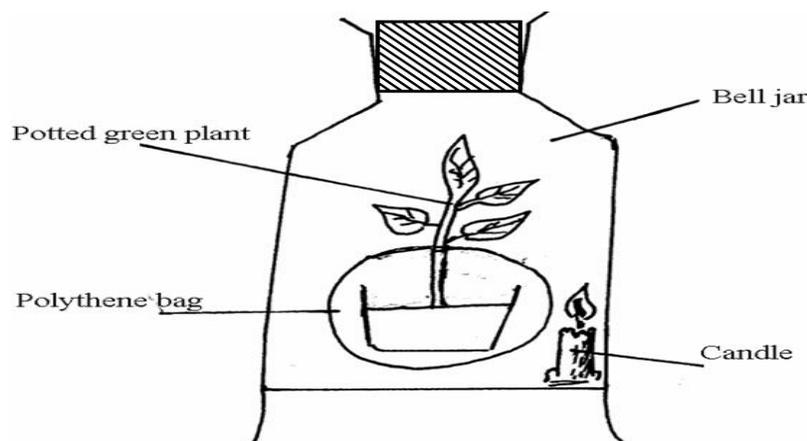

1. The table below shows the concentration of some ions in pond water and in the cell sap of an aquatic plant growing in the pond.

Ions	concentration in pond	concentration in cell
	Water (parts per million)	sap (parts per million)
Sodium	50	30
Potassium	2	150
Calcium	1.5	1
Chloride	180	200

- a) Name the process by which potassium ions could have been taken by this plant. **(1mk)**
- b) State **one** condition necessary for the process named in (a) above to take place. **(1mk)**
- 2.a) A student was viewing a slide preparation of a cheek cell under high power of a microscope. The features of the cell were blurred. Name the part of the microscope that the student would use to obtain a sharper outline of the features. **(1mk)**
- b) Give the formula used to calculate magnification in light microscope. **(1mk)**
3. The diagram below represents an organ from a bony fish. Study the diagram and answer the questions that follow.

- a) Name the organ. **(1mk)**
- b) State **three** ways in which part K is adapted to its function. **(3mks)**
4. A student investigating an aspect of photosynthesis set up an experiment as shown in the diagram below.

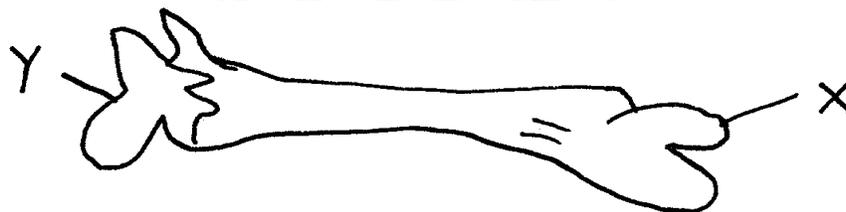

The bell jar was made air tight. After some time the candle went off. The student then placed the set-up in direct sunlight for 5 hours.

- a) Give a reason why the burning candle was inclined. (1mk)
- b) Suggest a reason why it was necessary to cover the pot with polythene bag (1mk)
- 5. Explain how sunken stomata lower the rate of transpiration. (2mks)
- 6. State **three** functions of mammalian blood other than transport of substances. (3mks)
- 7. State **three** ways in which the ileum is structurally adapted to the absorption of digested food. (3mks)
- 8. State how mitochondria is adapted to its function. (2mks)
- 9. State how xylem is adapted to its function. (3mks)
- 10. State functional differences between arteries and veins. (2mks)

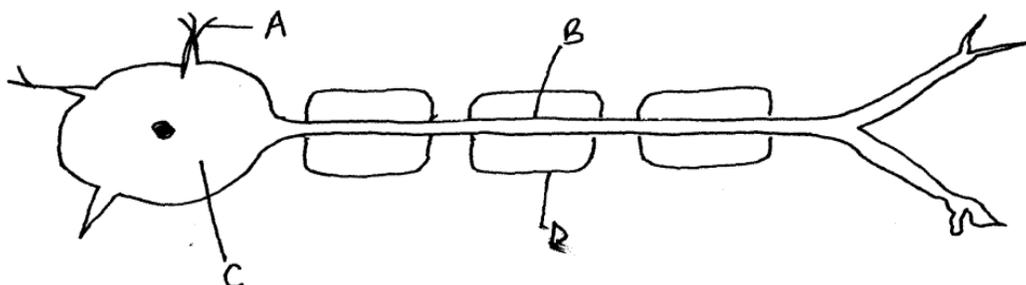

Arteries	Veins

- 11. What is oxygen debt? (2mks)
- 12. What is the importance of sebaceous glands in the human skin? (2mks)
- 13. Name the hormones responsible for the regulation of blood sugar level. (2mks)
- 14. The diagram below represents a mammalian bone.

- a) Identify the bone. (1mk)
- b) Name part labeled Y (1mk)
- c) Name the type of joint formed at the part labeled X. (1mk)

15.

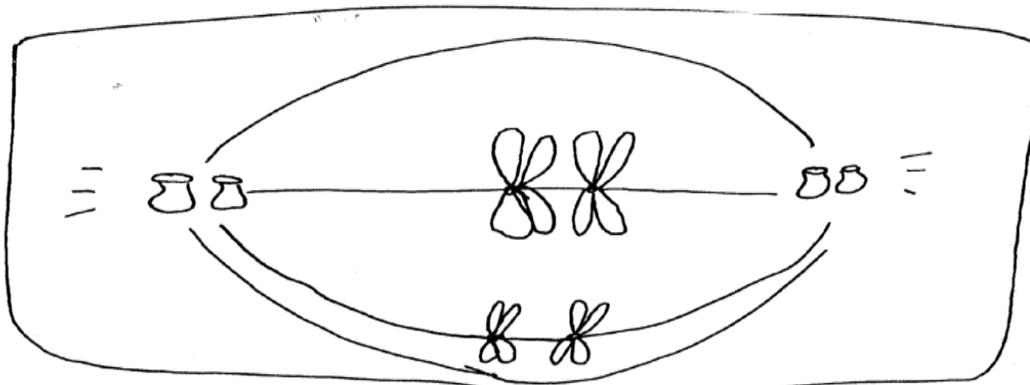

- a) Name the parts labeled A and C. (2mks)
- b) State the functions of part labeled B and D. (2mks)
16. In guinea pig, there are two alleles for hair colour, black and white. In a breeding experiment, all the F1 phenotypes produced from a cross between pure-breeding black-haired and pure-breeding white-haired parent had black hair.(Use letter B to represent gene for hair colour)
- a) What is an allele (1mk)
- b) Work out the phenotypic ration of the F2 generation. (4mks)
17. Name parts of brain which control:
- a) Involuntary activities eg. Breathing (1mk)
- b) Control voluntary body movements. (1mk)
18. Define the following terms: (2mks)
- i) Cephalothorax
- ii) Eukaryotes
19. Below are four types of compound leaves

Identify the four types of compound leaves. (4mks)

20. To estimate the population of grasshoppers in Kogelo village 400 grasshoppers were caught, which were marked and released. After 24 hours 200 grasshoppers were caught out, of which 80 had been marked.
- a) Suggest the possible instrument that may have been used for capturing the grasshoppers. (1mk)
- b) Estimate the population size of the grasshoppers in the village. (2mks)
21. Explain how the following features assist in adapting xerophytes to their habitat. (2mks)
- i) Folded leaves
- ii) Leaves modified to spines

22. State the changes that occur in a nerve axon to produce an action potential (3mks)
23. Industrial wastes may contain metallic pollutants. State how such pollutants may indirectly reach and accumulate in the human body if the wastes were dumped into rivers. (3mks)
24. Name the causative agent of cholera. (1mk)
25. What is double fertilization in flowering plants. (2mks)
26. a) During implantation in a mammal, the blastocyst differentiates into 3 layers, which are: (3mks)
 b) Which of the layers named in (a) above normally differentiates to form the placenta. (1mk)
27. State **four** ways of breaking dormancy in a seed. (4mks)
28. a) Name the hormone responsible for metamorphosis during larval stage of an insect. (1mk)
 b) State the source of the hormone. (1mk)
29. Below is a stage of cell division.

- a) Identify the stage. (1mk)
- b) Give reasons for your answer in (a) above. (2mks)
30. State structural difference between sclerenchyma and colenchyma tissues (2mks)

Sclerenchyma	Colenchyma

NAME..... INDEX NO.....

SCHOOL..... SIGN.....

DATE.....

INSTRUCTIONS TO CANDIDATES.

- a) Write your name, Index Number and School in the spaces provided above.
- b) Sign and write the date of the examination in the spaces provided above.
- c) This paper consists of **TWO** sections A and B
- d) Answer **ALL** questions in section A, In section B answer question 6 (**compulsory**) and either question 7 or 8 in the spaces provided after question 8.

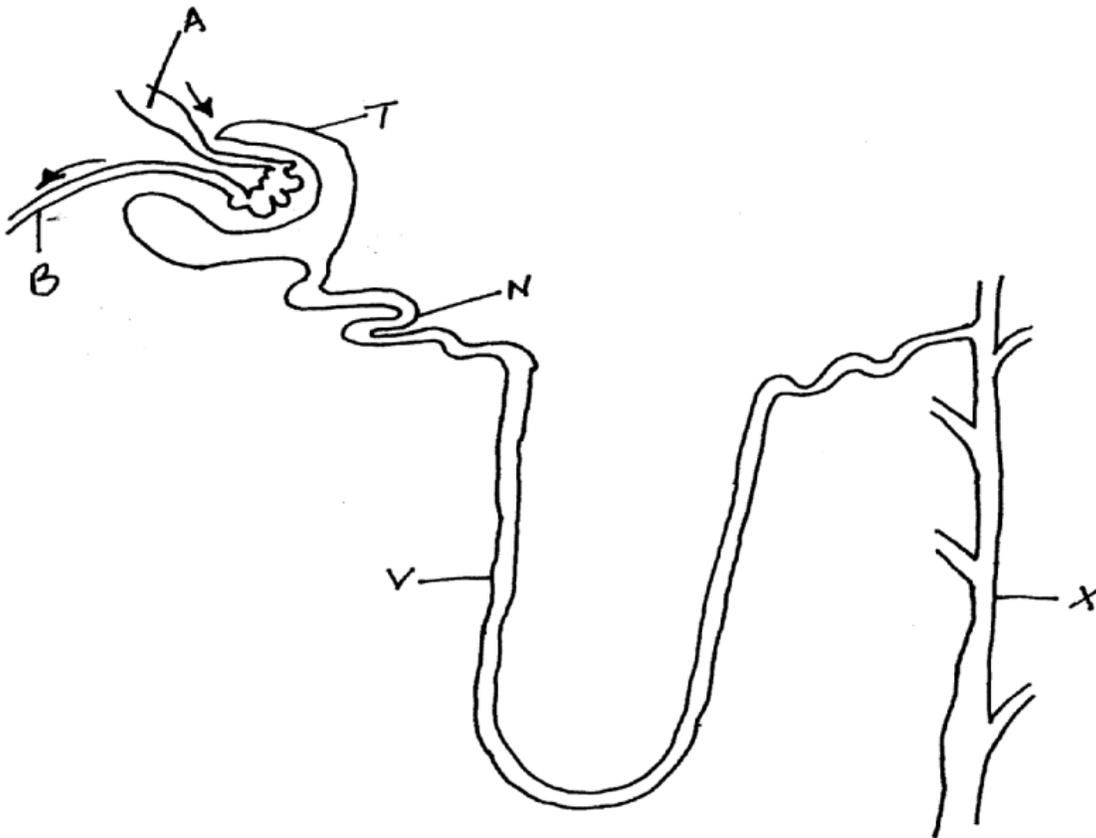

For Examiner's Use Only

SECTION	QUESTION	MAX SCORE	SCORE
A	1	8	
	2	8	
	3	8	
	4	8	
	5	8	
B	6	20	
	7	20	
	8	20	
	TOTAL	80	

SECTION A: (40MARKS)

Answer ALL questions in this section in the spaces provided.

1. Shown below is a section through the mammalian nephron.

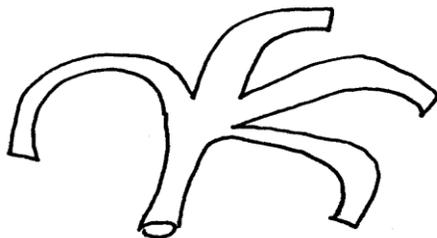

- a) Name the structures labeled:- (2mks)
 - b) Name **all** structures in a nephron which are normally present in the cortex region of kidney. (1mk)
 - c) Which region in the Nephron deals with conservation of body water (1mk)
 - d) Name **one** hormone that has an effect on part labelled X. (1mk)
 - e) How is part labeled N adapted to its function. (3mks)
2. a) In a certain family with two children, one child is blood group B while the other one is blood group O. Work out the genotype of the two children if the mother is blood group A and father group B. (4mks)
- b) What would be the phenotypic ration of the F₁ generation? (1mk)
 - c) What is haemolytic disease of the new-born (Erythroblastosis foetalis) (3mks)

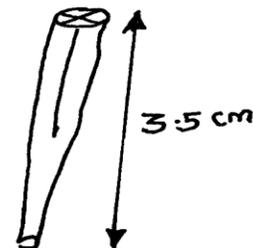

3. a) State **two** limitations of using fossil records as evidence of evolution. (2mks)
 b) What is the significance of isolating mechanisms in the process of evolution(3mks)
 c) Describe geographical distribution as an evidence of evolution. (3mks)
4. The results in the table below shows the effects of some conditions for seed germination. In each experiment, all other environmental conditions were kept constant, except for the one being investigated.

Experiment	Treatment	% germination
I	- Seeds placed in tightly closed container with pyrogallic acid.	0
II	i) Seeds kept in source of light. ii) Seeds kept in dark cupboard	96 97
III	i) Seeds kept in a refrigerator at 4 ^o C ii) Seeds kept in an oven at 60 ^o C iii) Seeds kept at 35 ^o C	0.5 0 92
IV	i) Dry seeds in closed containers ii) Moist seeds in closed container	0 87

- a) i) What was the purpose of pyrogallic acid in experiment (i) (1mk)
 ii) State the aim of the experiment (ii) (1mk)
 b) i) Account for the results obtained in experiment set-up (iii). (3mks)
 ii) State why 100% germination was not achieved in experiment (iv) (ii)(1mk)
 c) Of what biological significance is the condition necessary for germination been investigated by experiment (iv). (2mks)
5. A student obtained a castor oil petiole, measuring 4cm long, which was split half way to obtain 4 flaps. The two pieces were then placed in solutions of different concentrations in a beaker, for 10 minutes. The appearance after 10 minutes is as shown.

Piece in A

Piece in B

- a) Account for the appearance of the pieces in solutions A and B (6mks)
 b) State the significance of the biological process involved in the experiment. (2mks)

SECTION B (40 MARKS)

Answer question 6 (compulsory) in the spaces provided either question 7 or 8 in the spaces provided after question 8.

6. The data below was obtained from an experiment designed to measure the velocity of flow of water during the course of a single day in the xylem of two trees of the same species.

Time of day/hr		0300	0600	0900	1200	1500	1800	2100	2400	0300	0600
Velocity of flow/cm hr ⁻¹	Eucalyptus species	0	45	125	140	135	85	45	25	5	0
	Acacia species	-	5	105	135	110	45	30	25	10	0

- a) Using the same axes, draw graphs to show the velocity of flow against time. **(8mks)**

7. Explain how Biotic and Abiotic factors affect plants. **(20marks)**
8. How is the human eye adapted to its function? **(20mks)**

FOR EXAMINER'S USE ONLY

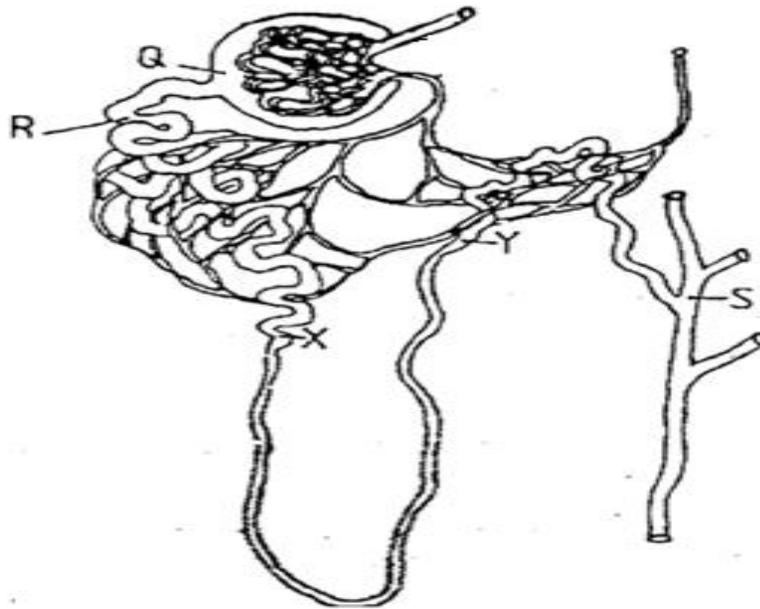

QUESTION	MAXIMUM SCORE	CANDIDATE'S SCORE
1-23	80	

QUESTIONS

1. Name the tissues whose cells are thickened with:
 - a) Cellulose and pectin. (1mk)
 - b) Lignin. (1mk)
2. The diagram below represents a fern.

- (a) Name Parts labeled A and B. (2mk)
 - (b) To which division does the plant belong? (1Mk)
3. State three measures that can be taken to control infection of man by protozoan parasites (3mk)
4. Explain how the following factors hinder self pollination in plants:
 - (i) Protogyny (1mk)
 - (ii) Dioecism (1mk)
5. Explain the likely effect on humans and other organisms of untreated sewage discharged into water body that supplies water for domestic use. (3mk)
6. Name two structures in herbaceous stems that enhance their support. (2mk)
7.
 - a) Define the term immunity. (1mk)
 - b) Distinguish between natural immunity and acquired immunity. (1mk)
 - c) Identify one immunizable disease in Kenya. (1mk)
8. State three differences between osmosis and active transport. (3mk)
9. The diagram below illustrates part of a nephron from a mammalian kidney.

a) Name the fluid found in the part labeled Q. (1mk)

b) Identify the process responsible for the formation of the fluid named in (a) above. (1mk)

c) Which two hormones exert their effect in the nephron? (2mk)

State three characteristics of members of kingdom Monera that are not found in other kingdoms. 3mks

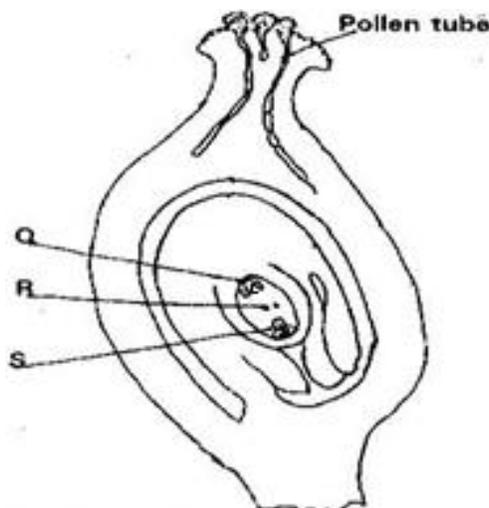

10. What is meant by the following biological terms?

i) Crenation (1mk)

ii) Haemolysis (1mk)

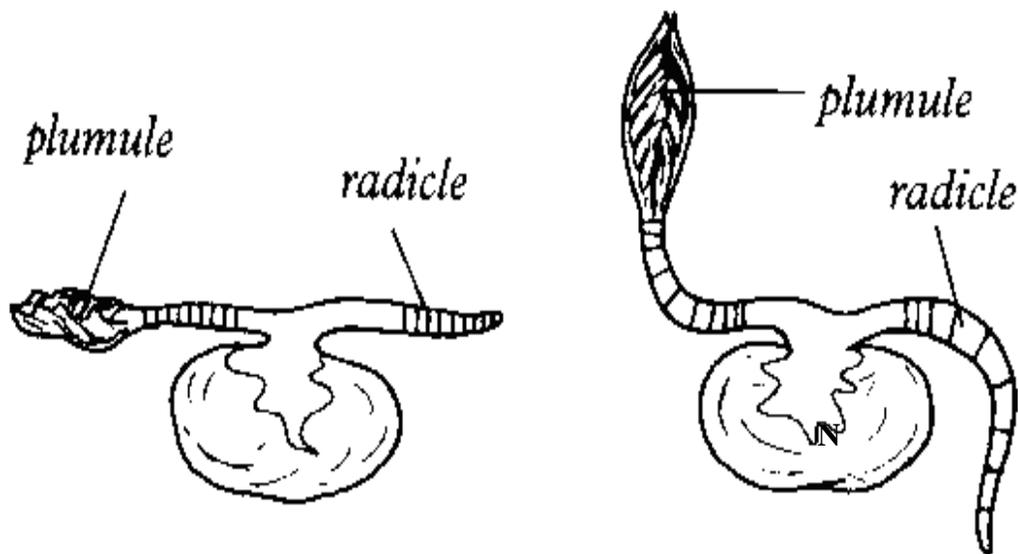

iii) Plasmolysis (1mk)

11. The diagram below shows a stage during fertilization in flowering plant.

- a) Name the parts labeled Q, R, and S. (3 mk)
 - b) State the function of the pollen tube. (1 mk)
12. a) State the major factor in the ‘Global warming’ experienced in the world today. (1mk)
- b) Suggest two ways of reducing the Global warming. (2mk)

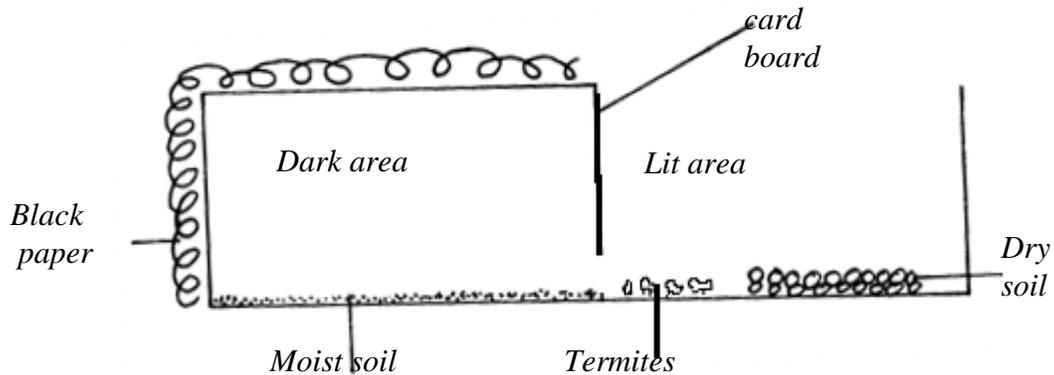

13. An experiment was set to investigate a certain aspect of response. A seedling was put on a horizontal position as shown in figure M below. After 24 hours, the set up was as shown in figure N.

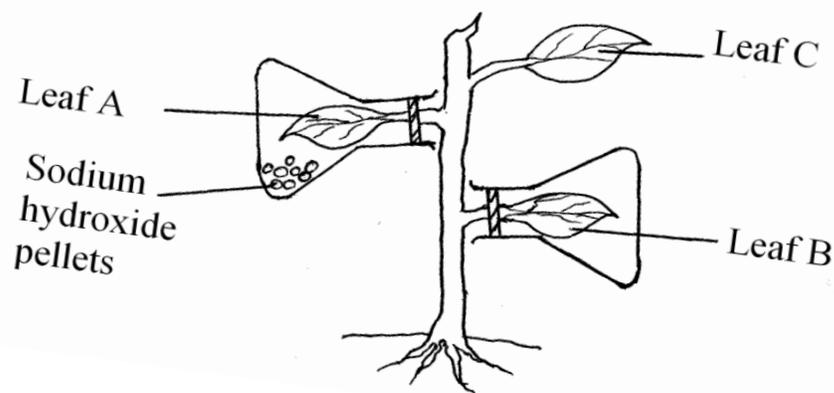

M

- a) Name the response exhibited. (1mk)
 - b) Explain the curvature of the shoot upwards. (3mk)
14. The paddles of whales and the fins of fish adapt these organisms to aquatic habitats.
- a) Name the evolutionary process that may have given rise to these structures. (1mk)
 - b) What is the name given to such structures? (1mk)
 - c) Give two examples of vestigial organs in man. (2mk)
15. a) Name a protein and vitamin involved in blood clotting.
- i) Protein. (1mk)
 - ii) Vitamin (1mk)
- b) Explain why blood is not normally used for transfusion after one month. (1mk)

16. A group of Form four students set up an experiment to investigate a biological process using termites. They used a small box in which a portion was covered with black paper and had moist soil. The open part had dry soil. Termites were placed inside in open area of the box.

- a) Predict what happened to the termites after 30 minutes. (1mk)
- b) What form of response is exhibited by termites? (1mk)
- c) State one biological significance of the above response to termites. (1mk)
- 17.) Name two fins in a bony fish which perform the following functions:-
- i) Changing direction. (1mk)
- ii) Control pitching. (1mk)
- (b) State the role of myotomes in fish. (1mk)
18. The diagram below represents an experimental set up to investigate a certain scientific concept. The potted plant was first destarched by keeping it in dark for four days.

The set up was then placed in sunlight for five hours and leaves were tested for starch.

a) What scientific concept was being investigated? (1mk)

b)i) Give the results likely to be obtained after starch test for A and B.

ii) Account for the results in leaf A in b (i) above. (1mk)

c) Why was leaf C included in the set-up? (1mk)

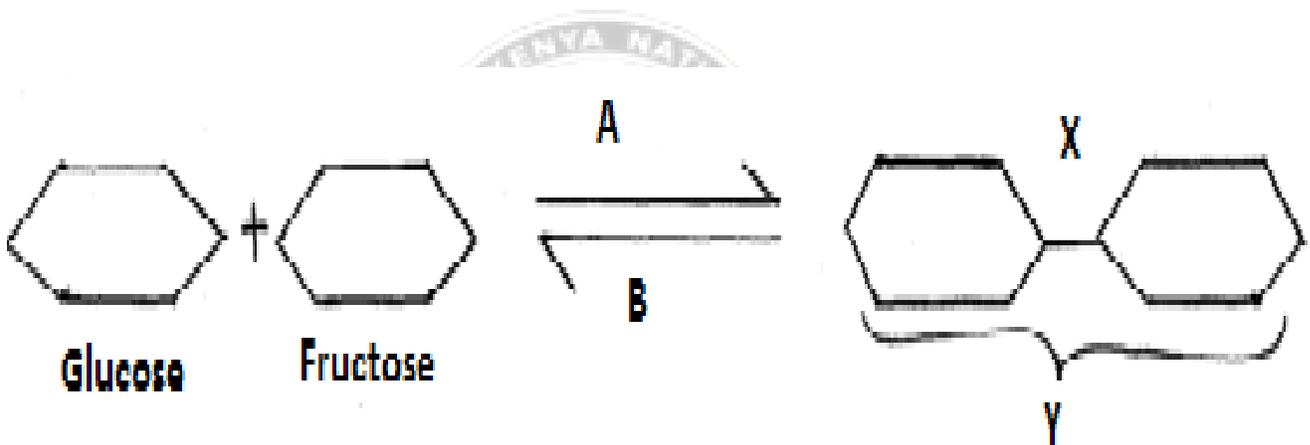

19. a) Explain the importance of transport in plants. (2mk)

b) What is the role of root hairs in plants? (1mk)

20. a) Identify the source of urea that is removed via the kidneys in a healthy human being.

b) Explain why a pregnant woman excretes less urea compared to a woman who is non- pregnant. (2mk)

Study the reaction below and answer the questions that follow.

a) What biological processes are represented by A and B? (2mk)

b) Identify the product Y. (1mk)

c) State the bond represented by X. (1mk)

21. Explain the events of the light stage of photosynthesis. (3mk)

22. Explain what happens in humans when the concentration of glucose in the blood rises above the normal level. (3mk)

a) Outline the main features of Lamarckian theory of evolution. (2mk)

b) In view of modern genetics, explain why Lamarck's theory is unacceptable. (1mk)

c) Name one factor in nature that increases the process of evolution. (1mk)

- c) This paper consists of **TWO** sections A and B
- d) Answer **ALL** questions in section A, In section B answer question 6 (**compulsory**) and either question 7 or 8 in the spaces provided after question 8.

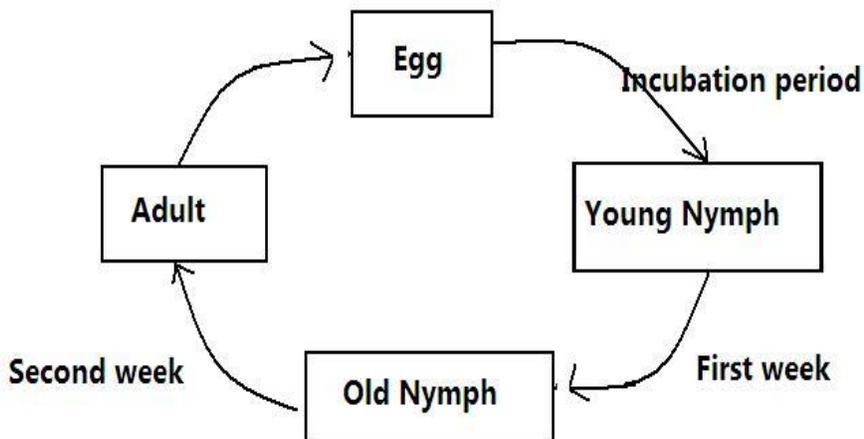

For Examiner's Use Only

SECTION	QUESTION	MAX SCORE	SCORE
A	1	8	
	2	8	
	3	8	
	4	8	
	5	8	
B	6	20	
	7	20	
	8	20	
	TOTAL	80	

SECTION A: (40MARKS)

SECTION A (40 MARKS)

1. The diagram below shows a life cycle of a cockroach

(a) Name the hormone that would be at high concentration during the first and second week and their functions.

(i) First week (2mks)

Hormone

Function

(ii) Second week (2mks)

Hormone

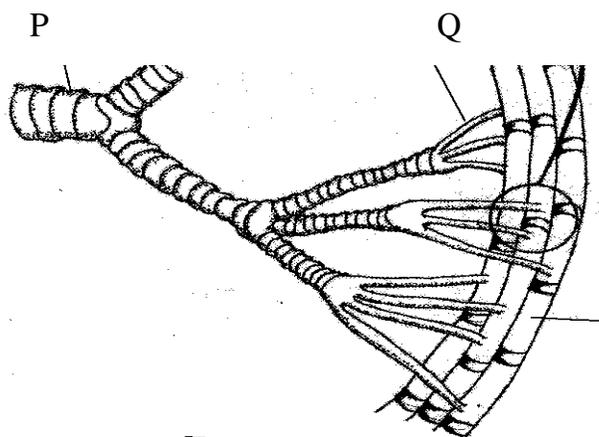

Function

(b) Name the structure that produces hormone named in a (ii) above (1mk)

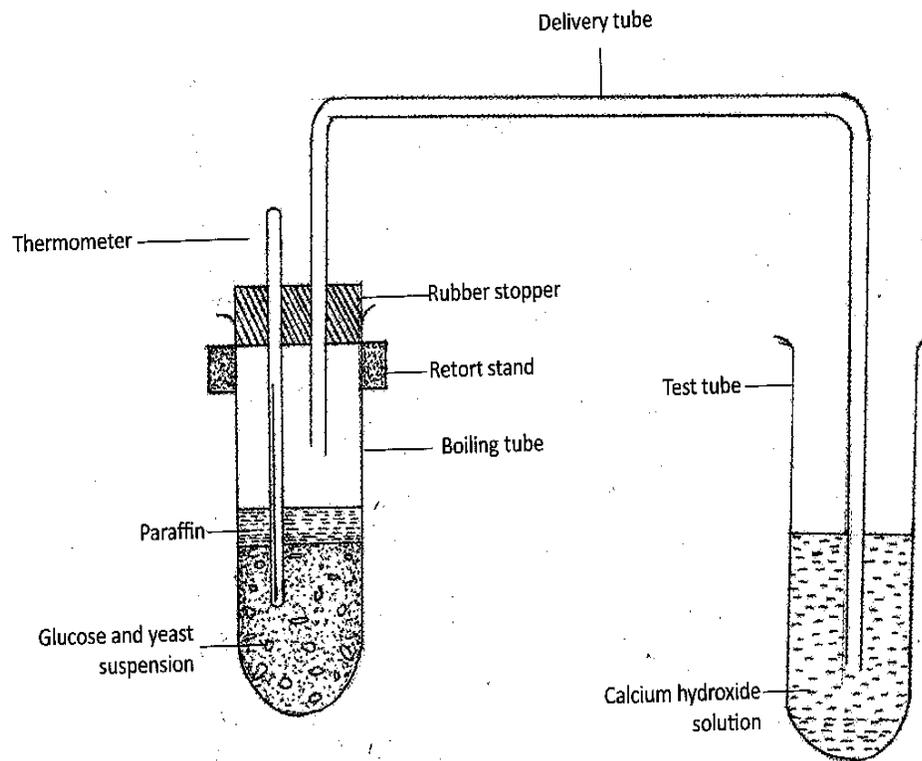

c) Name the process represented by the life cycle above (1mk)

d) State two importance for the process named in (c) above (2mks)

2. The diagram below represents part of a geasous system in a grasshopper.

- a) Name the structures labeled P and Q
 - b) State the function of the structure labeled P (1mk)
 - c) Describe the path taken by carbon (IV) oxide from the tissues of the insect the atmosphere (3mks)
 - d) How is the structure labeled Q adapted to its functions (2mks)
3. The set up below illustrates an experiment to demonstrate a certain biological process, before the addition of the yeast suspension the glucose solution was first boiled and then cooled at 40°C.

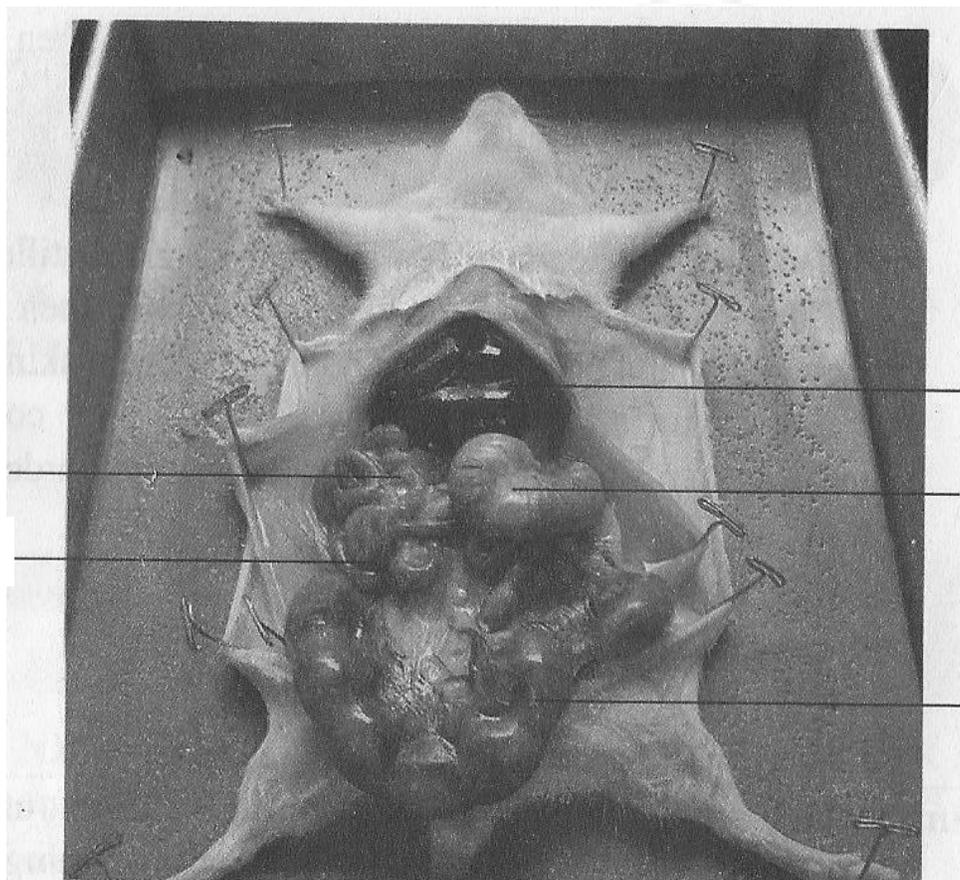

- a) What was the aim of the experiment? (1mk)
 - b) What observations would you make in the tubes a few minutes after the experiment begun (2mks)
 - c) Explain the observations made in (b) above (2mks)
 - d) Why was glucose solution boiled before cooling at 40°C (1mk)
 - e) How can you set up a control experiment for the above (1mk)
4. The following are short messages (sms) on cell phone communication between Mrs. Mkenzie and her husband. They can be used as analogies of gene mutation

	Intended message	Actual message
1.	I want a drive	I want a driver

2.	Yesterday was my shopping day	Yesterday was my hopping day
3	My skirt was stolen	My shirt was stolen
4	Tommorrow I will be visiting my team	Tommorrow I will be visitng my mate

- a) For each of these messages identify the type of gene mutation illustrated (4mks)
- b) State one example of chromosomal mutation that lead to
- i) Change in chromosome structure (1mk)
 - ii) Change in chromosomal number (1mk)
- c) Explain why genetic counseling is termed as one practical application of genetics (2mks)
5. The following is a photograph of s dissected mammal. Study the photograph and answer the questions that follows

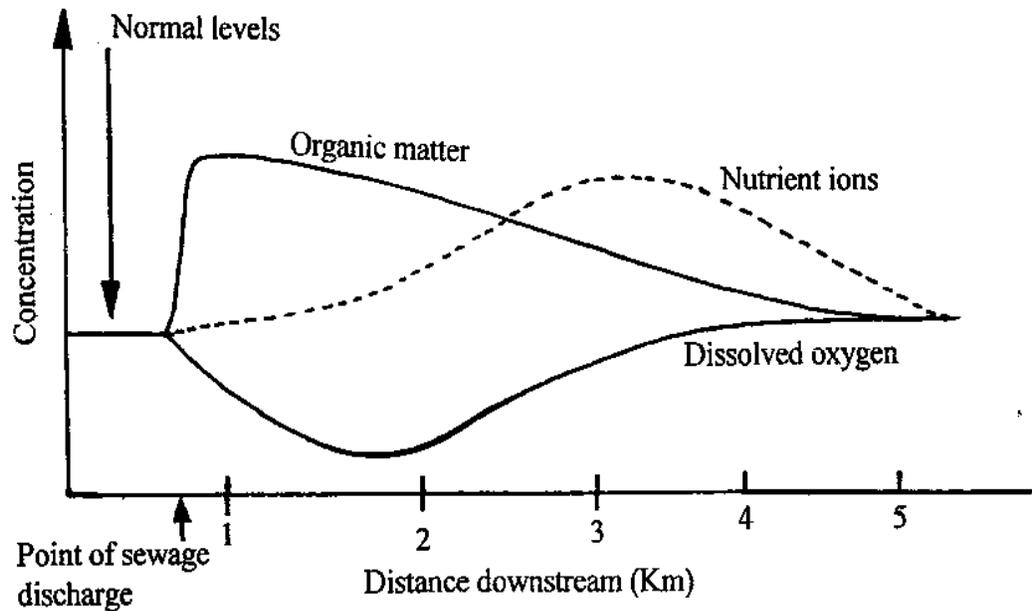

- a) Name the structures labeled R,S and T (3mks)
- b) On the photograph, label and name the site of production of vitamin K (1mk)
- c) State one function of the following parts (2mks)
- d) i) State the sex of the dissected mammal (1mk)

SECTION B (40 MARKS)

Answer question 6(compulsory) then choose any between question 7 and 8

6. The figure below shows the changes in the concentration of various substances in a river following the discharge of untreated sewage into it. Study it and answer the questions that follow

- a) Account for the changes in the concentration of:
- i) Organic matter (3mks)
 - ii) Nutrient ions (2mks)
 - iii) Dissolved oxygen (4mks)
- b) Describe the changes you would expect to observe with respect to:
- i) Fish population (3mks)
 - ii) Water plants and photosynthetic algae (4mks)
- c) State four ways of controlling the type of pollution illustrated above (4mks)
7. Describe how the following types of plants are adapted to their habitats:
- a) Mesophytes (10mks)
 - b) Halophytes (5mks)
 - c) Hydrophytes (5mks)
8. Discuss the adaptations of the human eye to its functions (20mks)

QUESTION	MAXIMUM SCORE	CANDIDATE'S SCORE
1-32	80	

QUESTIONS

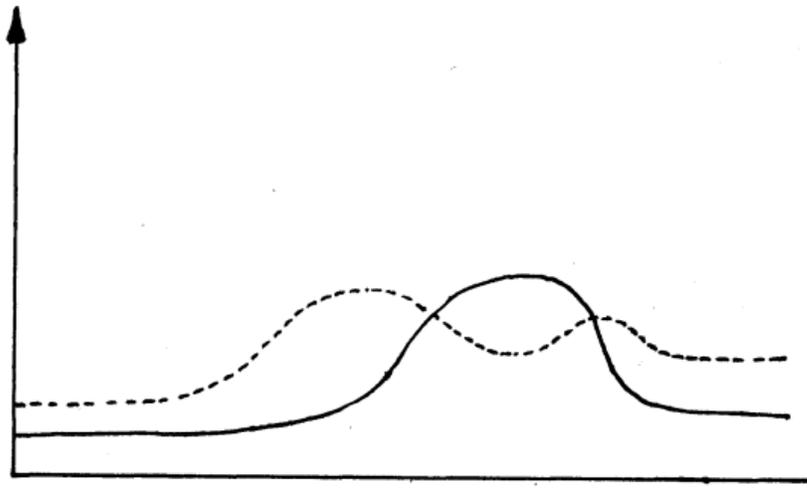

1. The scientific name for French bean is *Phaseolus vulgaris*
 - (a) What taxon does the term Phaseolus represents? (1 mark)
 - (b) State **two** rules that are followed when giving a scientific name to an organism. (2 marks)
2.
 - a) What is the function of the mirror in the microscope? (1 mark)
 - b) Which organelle would be abundant in:

Skeletal muscle cell	(1 mark)
Palisade cell	(1 mark)
3. A seedling shoot was exposed to unidirectional light as shown below. The set up was left in the dark room for three days.

- i) Make a drawing of the expected results at the end of the experiment. (2 marks)
 - ii) Explain the expected results at the end of experiment. (2 marks)
4. State **two** advantages of breathing through the nose than through the mouth. (2 marks)
5. Name **two** mineral elements required in the synthesis of chlorophyll. (2 marks)
6.
 - a) State **two** environmental condition that can cause seed dormancy. (2 marks)
 - b) Name the part of the leaf that elongates to bring about epigeal germination. (1 mark)
7.
 - a) State the function of amylase in human body. (1 mark)
 - b) Name **two** parts of the alimentary canal where amylase is secreted. (2 marks)
8.
 - a) Name **two** photochemical cells in human retina. (1 mark)
 - b) Name **one** chemical substance and two mineral ions involved in impulse transmission in mammals. (2 marks)
9. Give the function of melanin pigment produced in the skin of man. (1 mark)

10. What is the importance of saprophytic bacteria in an ecosystem? (1 mark)
11. A student while carrying out an experiment observed 8 cells across the field of view of light microscope. If the diameter of the field of view is 5 mm, calculate the average length of each cell in micrometers. (2 marks)
12. State **one** feature present in the flowers that can be used to distinguish between a monocotyledonous flower and dicotyledonous flower. (1 mark)
13. The graph below shows levels of oestrogens and progesterone during the human menstrual cycle.
- a) Mark on the graph the curve that represents

- i) Progesterone
- ii) Oestrogen
- b) Which is the most likely day of ovulation from the graph? (1 mark)
14. a) What are fossils? (1 mark)
- b) State **two** limitations of the use of fossils as an evidence of evolution. (2 marks)
- i) Grasshopper (1 mark)
- ii) Sheep (1 mark)
16. Name the type of response shown by;
- a) Leaves of *Mimosa pudica* when they fold after being touched. (1 mark)
- b) Sperms when they swim towards ovum (1 mark)
- c) Euglena when they swim towards the source of light. (1 mark)
- 17 a) Give an example of sex linked trait on x-chromosome. (1 mark)

b) Below is a nucleotide strand. (1 mark)

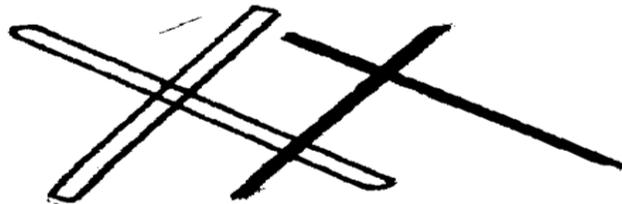

A	A	G	T	C
---	---	---	---	---

i) Identify the type of nucleic acid strand. (1 mark)

ii) Give your reason for your answer in (b) (i) above. (1 mark)

iii) Write down the complimentary base sequence in the other strand. (1 mark)

18. The diagram below shows a stage in cell division

i) Name the stage of the cell division that exhibits the process above. (1 mark)

ii) What is the significance of the phenomenon shown to a species? (1 mark)

19. Differentiate between respiration and respiratory surface. (2 marks)

20. State **two** adaptations of skin of the frog to gaseous exchange. (2 marks)

a) A man's urine gave a positive reaction with Benedict's solution. Name the disease he was suffering from. (1 mark)

b) State **two** ways in which the symptoms of the condition in (a) can be controlled. (2 marks)

22. A student collected an organism in the school compound and noted it had a segmented body and two pairs of legs per body segment.

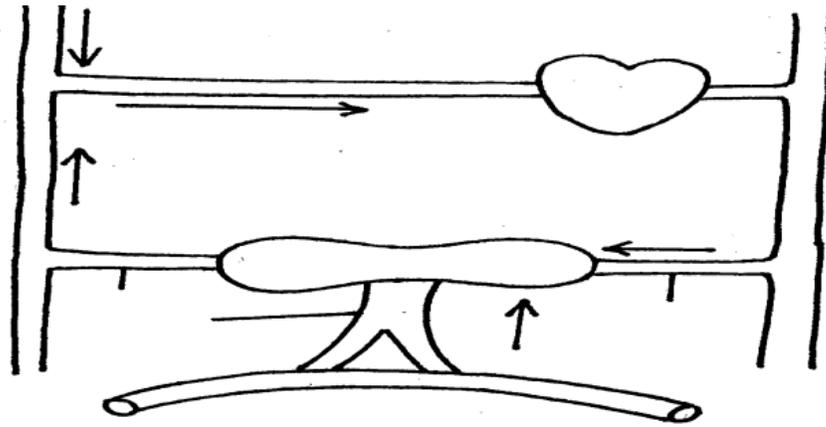

i) Name the class to which the organism belongs. (1 mark)

ii) State **two** other features the student may have observed. (2 marks)

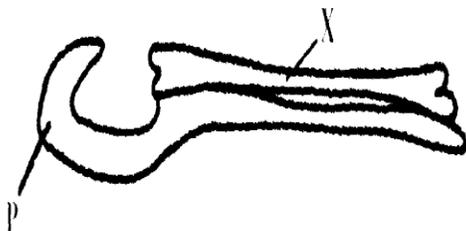

23 a) Name **two** structures of gaseous exchange in aquatic plants. (2 marks)

b) What is the effect of contraction of the diaphragm muscles during breathing in mammals? (2 marks)

24. The diagram below represents part of the mammalian blood circulatory system and some associated glands.

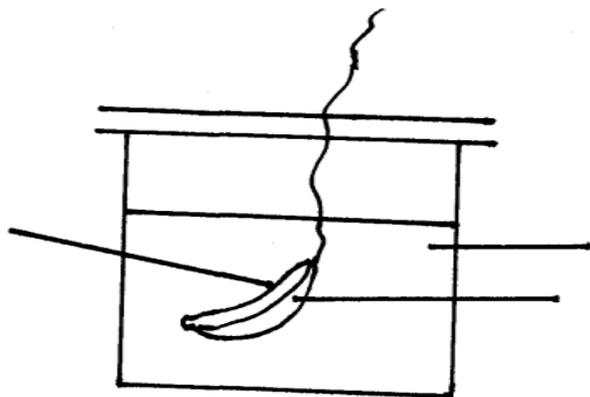

- (a) Name the blood vessels **A** and **B** (2 marks)
- (b) State **two** structural differences between the blood vessels labelled **A** and **C** (2 marks)
25. A student made equidistant marks on a radical of a dicotyledonous seedling. After three days the distance between the marks was measured.
- a) What was the aim of the experiment? (1 mark)
- b) Predict the results that were likely to be obtained by the student (2 marks)
26. a) Name the disease caused by H.I.V (1 mark)
- b) Give **two** reason why it is difficult to cure the disease named above. (2 marks)
- c) Give **one** preventive measure of the named disease. (1 mark)
27. Plants of a particular species grown in certain habitat flower at the same time. What is the importance of this adaptation (1 mark)
28. State **two** roles played by the bark in plants (2 marks)
29. The diagram below represents a bone obtained from a mammal.

- i) Name bone labelled **X**. (1 mark)
- ii) Name structure **P**. (1 mark)

30. A student mashed a piece of ripe banana and made it into paste by adding water, place the paste in a visking tubing and suspended it in a beaker containing iodine solution as shown below. The set up was left for 40 minutes.

- a) State the physiological process under investigation. (1 mark)
- b) Account for the result obtained in the table. (2 marks)
31. Industrial waste may contain metallic pollutants. Explain how the pollutants may indirectly reach and accumulate in the human body when the wastes are dumped into rivers (2 marks)
32. During oxidation of certain foods substances the respiratory quotient was found to be 0.718.
- i) Name the type of food substance being oxidized. (1 mark)
- ii) State **two** advantages of using the food substances named. (2 marks)

INSTRUCTIONS TO CANDIDATES.

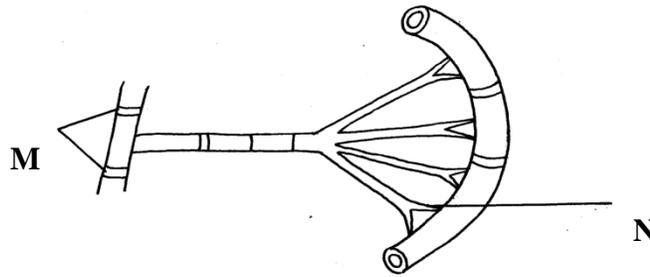

- a) Write your name, Index Number and School in the spaces provided above.
- b) Sign and write the date of the examination in the spaces provided above.
- c) This paper consists of **TWO** sections A and B
- d) Answer **ALL** questions in section A, In section B answer question 6 (**compulsory**) and either question 7 or 8 in the spaces provided after question 8.

For Examiner's Use Only

SECTION	QUESTION	MAX SCORE	SCORE
A	1	8	
	2	8	
	3	8	
	4	8	
	5	8	
B	6	20	
	7	20	
	8	20	
	TOTAL	80	

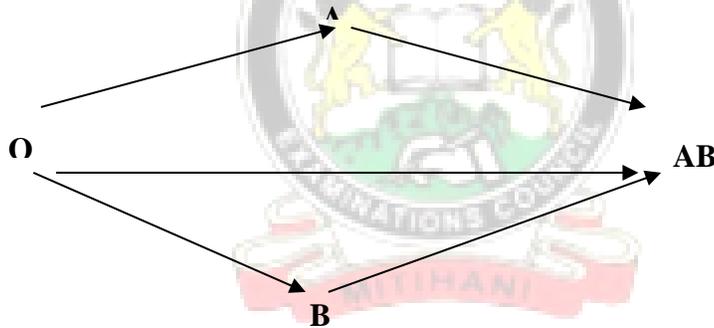

SECTION A: (40MARKS)

1. The diagram below represents part of a cockroach gaseous exchange system.

- a) State the function of the part labelled M (1 mark)
- b) Suggest how the part M is adapted to the gaseous exchange function (3 marks)
- c) How does the movement of oxygen in an insect and mammals from atmosphere to the tissue of its body differ (4marks)

2. The following chart below shows blood transfusion pathway

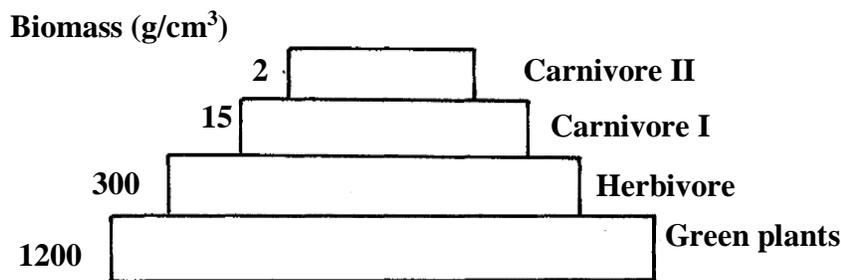

- a) What **five** conclusions can you draw from the flow chart (5marks)
- b) Why is the knowledge of blood groups necessary before blood transfusion? (1 mk)
- c) Apart from knowledge of blood groups, state two precautions that must be observed during blood transfusion (2 marks)

3. The genetic disorder haemophilia is due to a recessive sex linked gene. A man who is haemophiliac married a woman who is a carrier for the condition.

- a) Using letter (H) to represent normal condition and (h) to represent haemophiliac condition.
 - i) What is the genotype of the man and the woman? (2 marks)
- Man
woman

- ii) Work out across between the man and the woman (3marks)
- b) What is the chances that both the first and the second sons will be haemophiliac? (2 marks)
- c) Haemophilia is most common in the males than females humans. Explain. (1 mark)

4. The diagram below shows different groups of organisms and their biomass.

- a) Define the term biomass (2 mks)
 - b) Account for the decrease in biomass in the successive group of organisms (3 mks)
 - c) Describe how energy from the sun is made available for carnivore II (3 marks)
5. Cell of a certain herbaceous plant were found to have an average diameter of 2.5µm the cells were put in varying concentrations of salt solutions. The average diameter of the cells in each solution was determined and the results were recorder as shown in the table below.

Concentration of salt solution %	Diameter of cells. µ m
1	5.0
5	4.0
10	3.0
15	2.0

- a) From the results above, determine the cell sap concentration (1 mark)
- b) Give an explanation for the average diameter of the cells placed in the following salt concentration compared to the normal diameter of the cells.
 - i) 1 % salt solution (3 marks)
 - ii) 15 % salt solution (3 marks)

Give the term used to describe salt solution whose concentration is the same as cell sap. (1 mark)

SECTION B (40 .MARKS)

Answer question 6 (compulsory) and either 7 or 8 in the space provided after question 8.

6. In the experiment, the population growth of yeast cells in a Petri dish was determined over a period of 75 minutes. The results below were obtained.

Time in minutes	Number of yeast cells
0	4
5	6
10	8
15	10
25	30
30	50
35	80
40	120
45	140
50	150
55	160
65	166
75	166

- a) Using a suitable scale, plot a graph of number of cells against time in minutes (6 marks)
- b) Name the type of the curve you have drawn above (1 mark)
- c) Determine the number of yeast cells after 37 minutes (1 mark)
- d) After how long was the population of yeast cells 144? (1 mark)
- e) Work out the rate of cell division between 32 minute and 42 minute (2 marks)
- f) Account for the shape of graph between 45th minute and 60th minute (3 marks)
- g) In a field study to estimate the population of grasshoppers in the school field of 4 km², 60 grasshoppers were caught using sweep nets, marked with red paint and released back to the field. The following day students went back with their sweep nets and caught 100 grasshoppers, in which 20 were found to be already marked.
- i) Calculate the population size of grasshoppers in the field (2 marks)
- ii) Calculate the population density of the grasshoppers in the field (2 marks)
- iii) What factors would maintain the population of grasshoppers and yeast cells at the carrying capacity. (2 marks)
7. Describe the various evidences to support organic evolution (20 marks)
8. a) Describe how the heart beat is controlled and maintained (10 marks)
- b) Describe the structure and function of thrombocytes (10 marks)

FOR EXAMINER'S USE ONLY

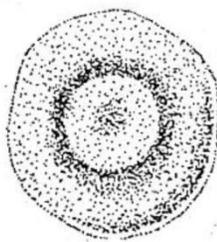

QUESTION	MAXIMUM SCORE	CANDIDATE'S SCORE
1-24	80	

QUESTIONS

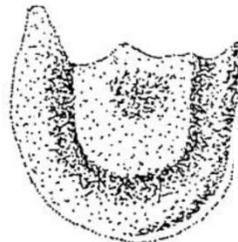

1. Identify the following apparatus and state its functions.

- (i) Name (1mark)
 (ii) Function (1mark)
2. A student measured the length of a mitochondrion on a photomicrograph whose magnification was X 40000 and found it to be 1mm. Calculate the actual size of the mitochondrion. (3 marks)
3. (a) Name the kingdom whose members have a cell wall made of chitin (2mark)
 (b) Besides the abdomen, name the other body part of the members of arachnida (1mark)
 (c) State two main characteristic features of members of division Bryophyta (2 marks)
- 4 A form one student obtained the results below in an experiment

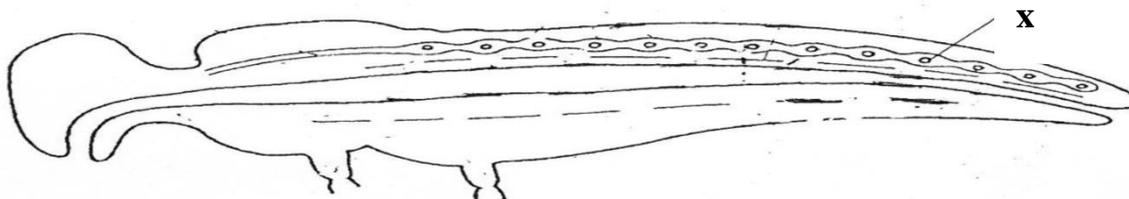

Red blood cell
At start of experiment

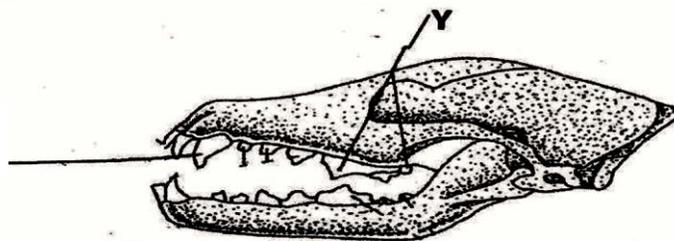

Red blood cell
At end of experiment

- (a) Identify the physiological process under investigation. (1mark)
 (b) Account for the result obtained (3marks)
- 5 (a) The diagram below illustrates the flow of blood in a certain organism. By use of arrows, show the direction of blood flow. (1mark)

- b) Identify structure X (1mark)
- c) State 2 functions of haemolymph (2marks)
- 6 A certain species of flowering plants relies entirely on sexual reproduction for propagation. The chromosome number of its Ovary tissue is 16. Predict the chromosome number in
- (a) (i) Male nucleus (1mark)
- (ii) A cell of the endosperm (1mark)
- (b) How does the male nuclei reach the ovule after pollination (2marks)
- 7 The diagram below represents dentition formula of a certain animal

Identify the parts labeled X and Y giving a function for each

X

Function

(2marks)

Y

Function

2marks)

- 8 State **THREE** causes of seed dormancy (3marks)
- 9 (a)(i) Name the principal site of gaseous exchange in the lungs of humans (1mark)
- (ii) State 2 ways in which the structure named in (a) (i) above is adapted to its function (2marks)
- (b) Apart from gaseous exchange give one other function of stomata (1mark)
10. The equations below represent certain reactions in living organisms.
- (i) $C_6H_{12}O_6 \longrightarrow 2C_2H_5OH + 2CO_2 + 210\text{ kJ}$
- (ii) $C_6H_{12}O_6 + 6O_2 \longrightarrow 6H_2O + 6CO_2 + 2880\text{ kJ}$
- (a) Name the reactions represented by the equations (2 marks)
- (b) Calculate the RQ for the reaction (II) (2marks)
- 11(a) In a plant breeding experiment red flowered plants were crossed with white flowered plants.

Both plants were pure breeding. All F1 offspring's had pink flowers. Give a genetic explanation for this occurrence (1mark)

b) The words given in the table below are analogous to mutations. Fill in the table the type of mutation in each case (2 marks)

	Intended	Actual	Mutation
(i)	From	Form	-----
(ii)	super	supper

(c) State ONE chemical agent that causes mutation (1mark)

12 Explain what would happen if there is more water in the mammalian blood (4marks)

13 (a) List three evidences that support organic theory of evolution (3 marks)

(b) Why is Larmack's theory of evolution not acceptable? (2marks)

14 The diagram below represents a mammalian bone

(a) Name the bone (1mark)

(b) Name the type of joint formed by the bone at its anterior end **A** and the adjacent bone

(c) State the function of part labeled **B**. (1mark)

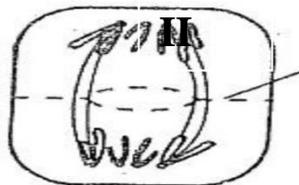

15 (a) In an accident, a victim suffered brain injury consequently the heart beat was affected.

Name the part of the brain which was injured. (1 mark)

(b) Differentiate between simple reflex action and conditioned reflex action (2marks)

16 Explain why the carrying capacity for wild herbivorous animals is higher than that for cattle in a given piece of land. (2marks)

- (b) Name the bacteria found in root nodules of leguminous plants (1mark)
- c) What is the role of the bacteria named in (b) above (1mark)
- 17 (a) In deamination, the amino group of the amino acid is normally removed to form ammonia. What happens to this ammonia? (1mark)
- (b) State **Three** reasons why plants do not have a problem of excretion (3marks)
- 18 (a) State where the light stage of photosynthesis process occur. (1mark)
- (b) Give **TWO importances** of the light stage in photosynthesis (2marks)
- 19 Name the three types of transpiration (3 marks)
- 20 Name **THREE** support tissues found in woody plants (3 marks)
- 21 The figure below represents cytoplasmic division in animal cell and plant cell.

T

- a) Identify the phase of cell division (1mark)
- b) Name the structure labeled T (1mark)
- c) Name the part of the plant from which the cell labeled II was obtained (1mark)
- 22. The table below gives information about some diseases. Complete the table (4marks)

Disease	Type of organism causing the disease	Mode of transmission
1.....	Plasmodium Spp.	Bites by Anopheles mosquito
2. Amoebiosis	Ingestion
3. Cholera	Vibrio cholerae
4. Typhoid	Taking in contaminated food or water

- 23. State one survival value of Nastic response (1mark)
- 24 (a) State the major effect of decrease of juvenile hormone (1mark)
- (b) Explain the meaning of the term instar (1mark)

INSTRUCTIONS TO CANDIDATES.

- Write your name, Index Number and School in the spaces provided above.
- Sign and write the date of the examination in the spaces provided above.
- This paper consists of **TWO** sections A and B
- Answer **ALL** questions in section A, In section B answer question 6 (**compulsory**) and either question 7 or 8 in the spaces provided after question 8.

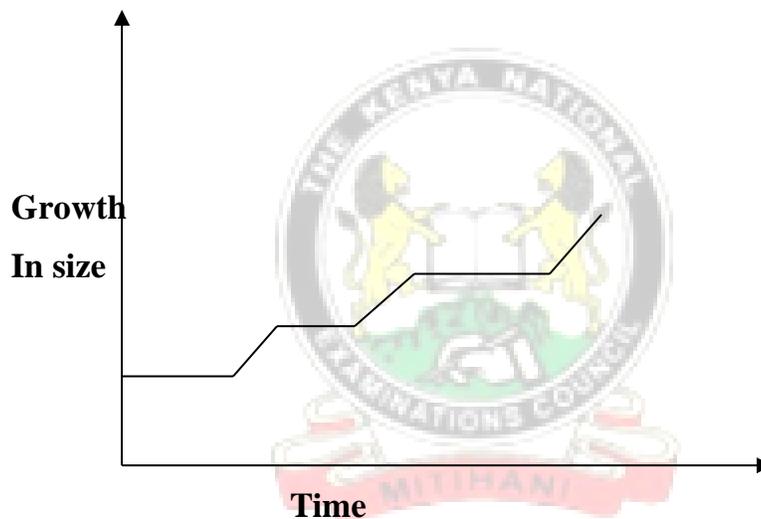

For Examiner's Use Only

SECTION	QUESTION	MAX SCORE	SCORE
A	1	8	
	2	8	
	3	8	
	4	8	
	5	8	
B	6	20	
	7	20	
	8	20	
	TOTAL	80	

SECTION A: (40MARKS)

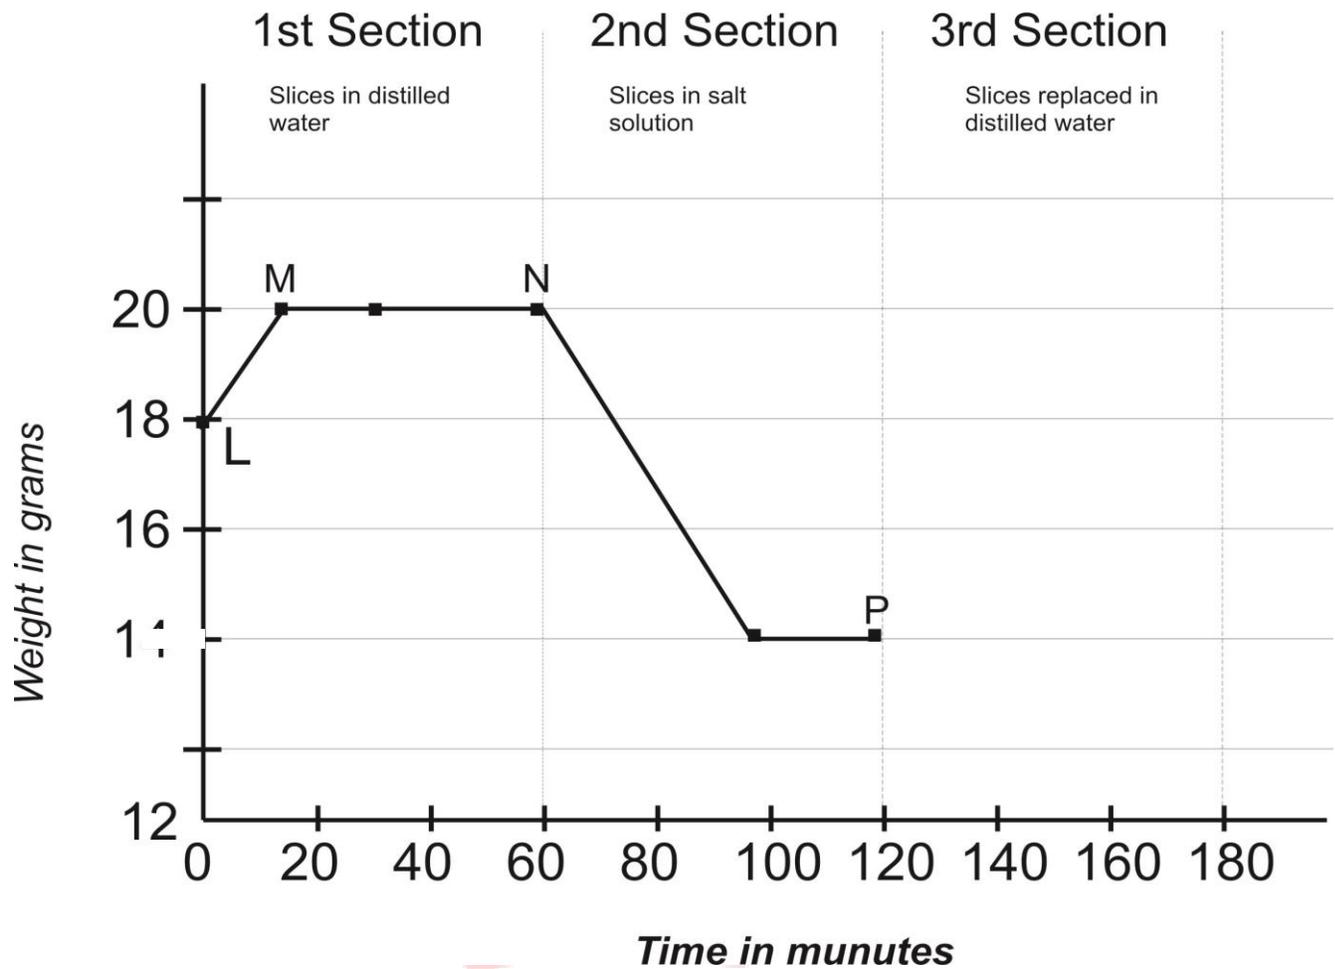

1. A human gene which is Y-linked controls the length of hair on male ears. One allele produces non-hairy ears while the other produces hairy ears, (hairy pinna).
 - (a) What are alleles (1mark)
 - (b) If a man with hairy ears/pinna marries, work-out the phenotypes of his children. (Use letter h to represent gene for hairy pinna). (4 marks)
 - (c) Explain why this trait is not observed in females (2marks)
 - (d) Give one other trait in man that is Y—linked (1mark)

2. (a) The graph below represents the growth pattern of animals in a certain phylum

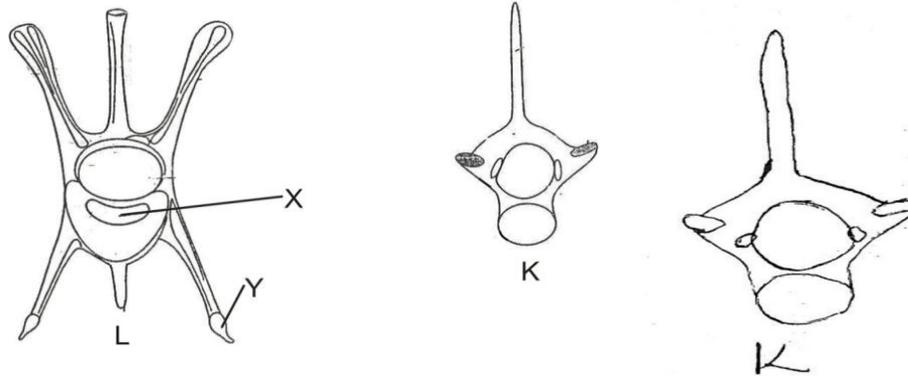

- (i) Name the phylum showing the above growth pattern (1mark)
 - (ii) State the type of growth shown (1mark)
 - (iii) Explain the growth pattern illustrated by the graph (3marks)
- (b) Explain the meaning of
- i) Growth (1mark)
 - (ii) Development (1mark)
 - (ii) Cleavae . (1mark)
-
3. In an experiment some slices were cut from a living potato tuber and were immersed in distilled water for one hour. After that the slices were immersed in a concentrated salt solution for another one hour. The slices were taken out of the liquid, weighed and immersed

again in the liquid at regular intervals. The results are shown in the graph below. Point L shows the beginning of the experiment.

- a) Give the name given to the condition of the cells of the slices at point L (1mark)
 - b) (i) find the change in weight between L and M (1mark)
 - (ii) Which process brings about this change in weight? (1mark)
 - (c) Explain the condition of the cells at point N. (2mark)
 - (d) The slices were removed from the concentrated salt solution at point P and washed in distilled water. Draw a curve on the graph, to show what would happen in the next one hour in the third section. (1mark)
 - (e) State two characteristics of active transport (2marks)
4. (a) Explain how carbon (IV) oxide produced by respiring mesophyl cells of flowering plants reaches the atmosphere (4 marks)
- (b) How are submerged hydrophytes adapted for gaseous exchange (2marks)
- (c) State 2 respiratory diseases in Man (2marks)

5. The following figures are anterior views of two vertebrae

- a) Identify the vertebrates (2marks)
 - b) State where vertebra **K** is located in human body (1mark)
 - c) Name two parts labeled **X** and **Y** in vertebrae **L** (2marks)
 - d) How is vertebra **K** adapted to its function (3marks)
6. An investigation was carried out between 2003 and 2012 to study the changes of fish population in a certain small lake. Four species of fish, **T**, **W**, **M**, **P** were found to live in this lake. In 2004 a factory was built near the lake raising the average temperature from 25°C to 30°C. In 2005 sewage and industrial waste from a nearby town was diverted into the lake. 2007, discharge of hot water, sewage and industrial waste into the lake was stopped. The fish population during the period of investigation are shown in the table below.

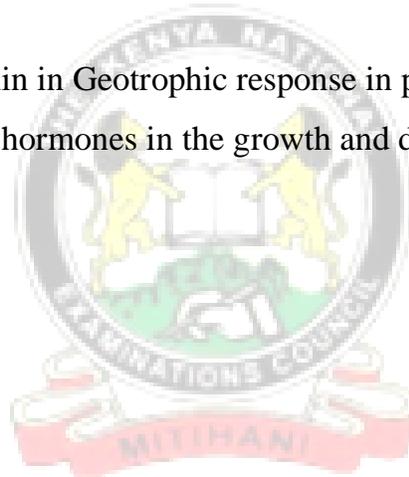

Fish species	2003	2005	2007	2009	2010	2011	2012
T	5900	200	17	100	700	4300	8000
W	300	25	8	19	60	400	508
M	30	120	0	0	0	0	0
P	4300	260	25	30	35	510	807

- (a) (i) In which year were the fish population lowest? (1mark)
- (ii) State the factors that might have caused the lowest fish population during the year you have stated in (a)(i) above (3marks)

- (iii) Explain how each factor you have stated in (a)(ii) above could have brought about the changes in fish population (6marks)
- (b)(i) What is the difference in the rate of population recovery of species T and P? (3marks)
- (ii) Suggest two biological factors that could have led to this difference (2marks)
- (c) (i) State a method that might have been used in estimating the fish population in the lake? (1mark)
- (ii) State one advantage of the method you have stated in (c) (i) above (1mark)
- (iii) State three limitations of the method named in (c) (i) above. (3marks)

7. How is the mammalian skin adapted to its functions (20 marks)

8. (a) Explain the role of Auxin in Geotropic response in plants (5 marks)
- (b) Describe other roles of hormones in the growth and development of plants (15 marks)

QUESTION	MAXIMUM SCORE	CANDIDATE'S SCORE
1-24	80	

QUESTIONS

1. (a) State **two** structural adaptations that make xylem vessels suitable for transport of water and mineral salts. (2mks)
- (b) List any **three** adaptations of the root hair cells to their functions (3mks)
2. (a) Why would you give an athlete glucose and not sucrose after a race? (1mk)
- (b) What happens to lactic acid after oxygen debt recovery? (2mks)
3. (a) What is gene mutation (1mk)
- (b) State **two** disorders in human beings caused by gene mutations (2mks)
- (c) What name is given to the factors in the environment that encourage or speed up mutation? (1mk)
4. State the role of the following elements to the growth and development of plants (3mks)
 - (i) Calcium
 - (ii) Magnesium
 - (iii) Nitrogen
5. State **three** environmental factor that affect the rate of stomatal transpiration (3mks)
6. (a) What is the function of the following parts of the male reproductive system (3mks)
 - (i) Epididymis:-
 - (ii) Seminal vesicle:-
 - (iii) Interstitial cells:-
- (b) The diagram bellow shows the structure of a sperm cell. Identify the parts labeled A, B and C and state their functions (6mks)

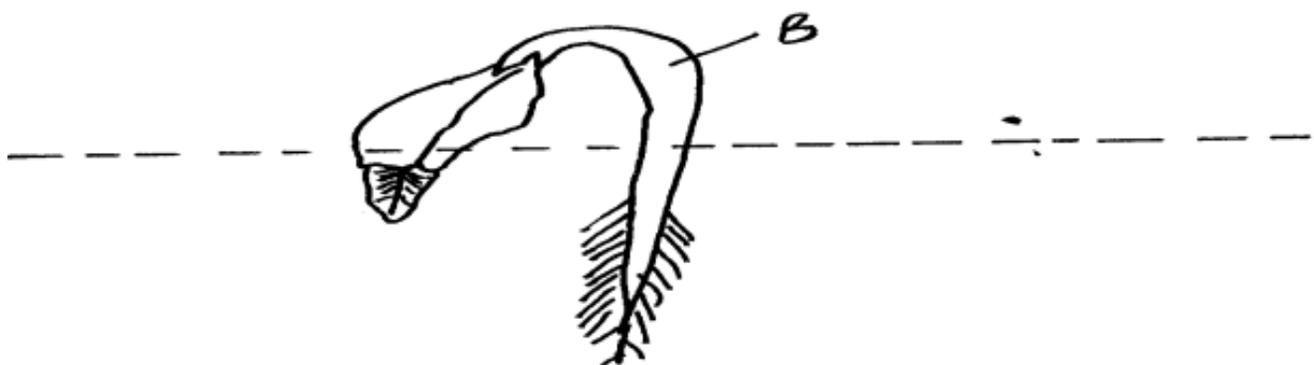

PART	IDENTITY	FUNCTION
A		
B		
C		

7. (a) Define the following terms:- (2mks)
- (i) Species:
- (ii) Binomial nomenclature:-
- (b) A certain sea animal has a smooth skin, lungs, regulates its body temperature and gives birth to young ones. The animal belong to the class (1mk)
8. For a leaf to be efficient for photosynthesis it has to be broad and flat. Explain (2mks)
9. (a) In an accident, a victim suffered brain injury. Consequently the heart beat was affected.
- Name the part of the brain which was injured (1mk)
- (b) State **two** differences that may be observed between a normal male and one who is incapable of producing testosterone. (2mks)
- Differentiate between convergent evolution and divergent evolution (2mks)
10. Convergent
- Divergent
11. (a) State **two** physiological changes that take place in a human skin in order to facilitate heat loss from the body. (2mks)
- (b) State **two** functions of sebum (2mks)
12. (a) Define the term Homeostasis (1mk)
- (b) State **one** way by which mammalian blood carry out homeostasis function (1mk)
- (c) Differentiate between nervous and endocrine communication in animals (3mks)

Nervous communication	Endocrine communication
(i)	
(ii)	
(iii)	

13. (a) Name the cartilage found between the bones of the vertebral column (1mk)

- (b) State the function of the cartilage named in (a) above (1mk)
14. State the functions of the following organelles:
 (a) Lysosomes:- (2mks)
 (b) Golgi apparatus:-
15. What is parthenocarpy? (1mk)
16. State **three** reasons why geneticists prefer to use **drosophila melanogaster** (fruitfly) for genetic experiments. (3mks)
17. What is the significance of active transport in the human body. (3mks)
18. In an attempt to clear a certain weed from St. Thomas Moore fish pond, Riang'ombe Sec. School Biology students introduced a species of beetles into the pond.
 (a) Give the term used for this method of control (1mk)
 (b) State **two** advantages of this method over the use of herbicides (2mks)
19. (a) State the causative agent of cholera (1mk)
 (b) What is the cause of dehydration in cholera victims (1mk)
20. (a) The numbers of chromosomes in a Gorilla cheek cell is 48. State the number of chromosomes in a Gorilla's ovum. (1mk)
 (b) Give the role of each of the following during cell division (2mks)
 (i) Centrides:-
 (ii) Spindle fibres:-
21. The diagram below shows a germinating seedling

- (a) Name the part of the seedling labeled B (1mk)
 (b) State the type of germination exhibited above (1mk)
22. (a) Name **two** hormones that control metamorphosis in insect (2mks)
 (b) Identify the plant hormone responsible for

- (i) Callus tissue formation **(1mk)**
 - (ii) Formation of abscission layer **(1mk)**

 - (iii) Fruit ripening **(1mk)**
- 23. (a)** Name **three** ways by which flowering plants eliminate waste products from their body **(3mks)**
- (b)** What is the importance of the following excretory products from plants **(3mks)**
- (i) Papain:-
 - (ii) Nicotine:-
 - (iii) Quinine:-
- 24.** State **three** types of skeletons found in animals **(3mks)**

	4	8	
	5	8	
B	6	20	
	7	20	
	8	20	
	TOTAL	80	

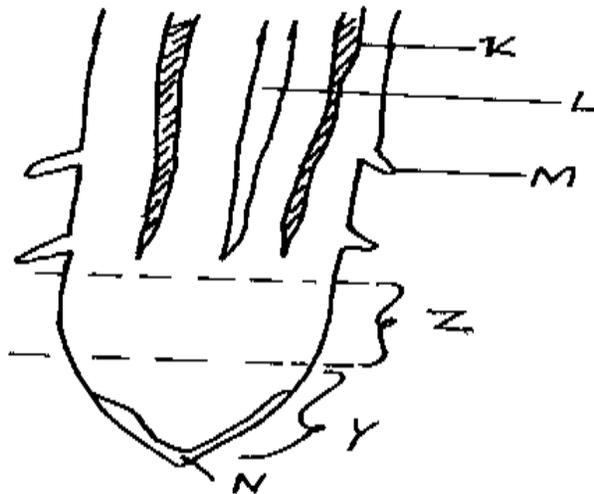

SECTION A: (40MARKS)

Answer all the questions in this section in the spaces provided

1. The diagram below represents a mature bread mould (Rhizopus)

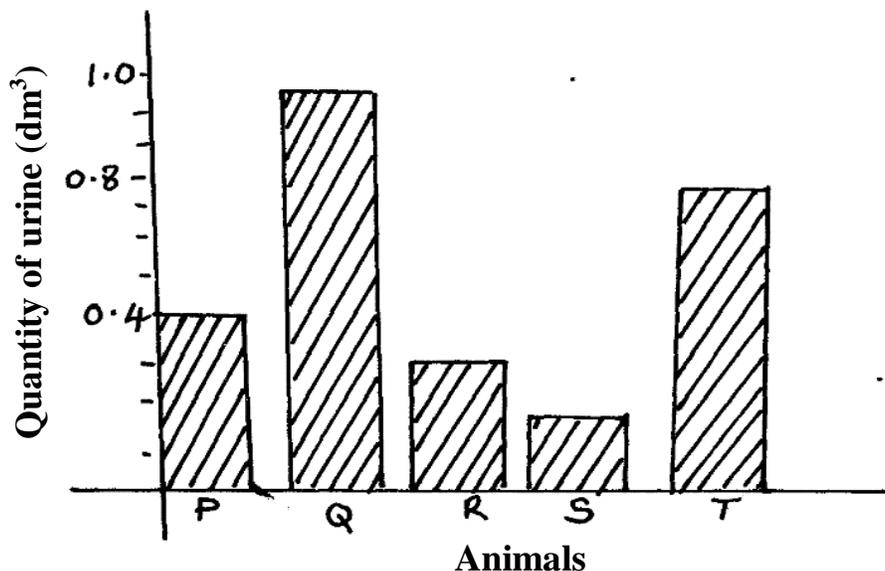

- (a) Name the structures P, Q and R (3mks)
- (b) What is the function of the structure P? (1mk)
- (c) State **two** economic importances of moulds (2mks)
- (d) (i) Name the kingdom to which bread mould belong (1mk)
- (ii) List down **one** general characteristic of member of the kingdom named in **d (i)** above. (1mk)
2. The diagram below represents a longitudinal section through a dicotyledonous root tip.

- (a) State the function of the part labeled M (1mk)
- (b) State the function of the part labeled N (1mk)
- (c) Name the process by which water moves from the soil particles into plant root (1mk)
- (d) How is the structure labeled L different from that of the stem of the plant. (1mk)
- (e) Name the zones labeled Y and Z (2mks)

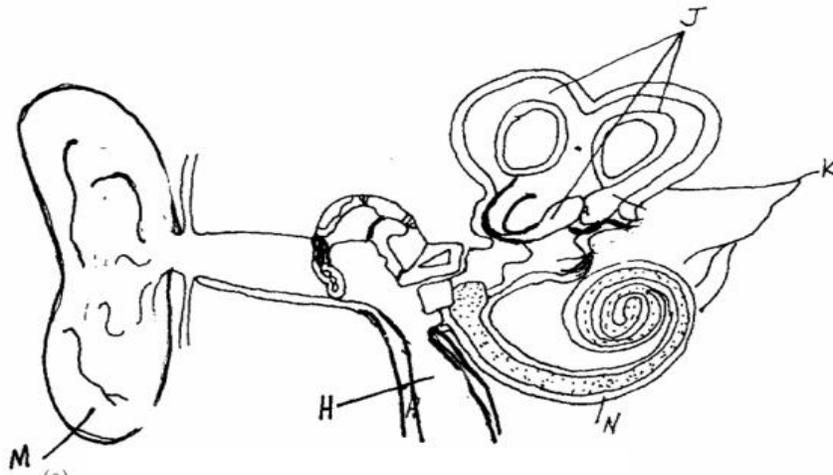

3. Pure breed of red cows and pure breed of white bulls were crossed to give F₁ calves which had a mixture of red and white coat known as roan. The F₁ were selfed.
- (a) Using letter R to represent gene for red colour and W to represent gene for white colour work out the phenotypic ratio of F₂. **(4mks)**
 - (b) Work out the genotypic ratio of a cross between F₁ offspring and white bull. **(3mks)**
 - (c) Comment on the gene(s) controlling the colour of coats in cattle mentioned above. **(1mk)**

4. The quantities of urine passed out per day was established in five animals P, Q, R, S and T of the same species in their natural habitats. The results were as shown below.

- (a) (i) Which of the five animals was likely to be excreting urine very rich in ammonia. **(1mk)**
- (ii) Give a reason for your answer in (a) (i) above **(1mk)**
- (b) (i) Which of the animals was likely to be living in a desert environment **(1mk)**
- (ii) Give a reason for your answer in (b) (i) above **(1mk)**
- (c) Explain how ingestion of very salty food may affect the quantity of urine produced. **(2mks)**

5. The diagram below represents a section through the mammalian ear. Study it and answer the questions that follow.

- (a) Name the structures labeled H and J (2mks)
- (b) State how the structures labeled H, M and N are adapted to their functions (3mks)
- (c) State what would happen if the structure labeled K was completely damaged (1mk)
- (d) Name the fluid contained in structure N (1mk)
- (e) Apart from hearing, state the other role performed by the human ear (1mk)

SECTION B (40 MARKS)

Answer question 6 (compulsory) in the spaces provided and either question 7 or 8

6. The table below shows the population of a housefly *Musca domestica* which is parasitized by wasps of species *Nasonia Spp*. The investigation of their population growth pattern was carried out for 70 weeks. In these experimental space and physical factors were assumed not to be limiting.

Time in weeks	0	5	10	15	20	25	30	35	40	45	50	55	60	65	70
<i>Musca domestica</i>	40	70	110	260	350	480	400	395	350	400	600	1400	2500	2400	2300
<i>Nasonia spp</i>	10	20	30	45	100	200	300	380	410	250	600	2000	4000	2000	2800

- (a) Using the readings in the table, plot graphs on the same axis of population growth of organisms against time. (8mks)
- (b) Account for the growth of
- (i) *Musca domestica* between 10th week – 25th week (1mk)
- (ii) *Nasonia species* between 40th week – 50th week (1mk)
- (c) What is the population of?
- (i) *Nasonia Spp* on the 62nd week (1mk)
- (ii) *Musca domestica* on the 4th week (1mk)
- (d) Bemex, another parasite of housefly was introduced into the ecosystem. Giving a reason what will be the effect on the population of
- (i) Housefly *Musca domestica* (2mks)
- (ii) *Nasonia Spp* (2mks)
- (e) In estimating the population of *Musca domestica* in the experiment above, capture-recapture method was used. **Describe** the procedure which was followed. (4mks)
7. Describe how fruits and seeds are suited to their models of dispersal (20mks)
8. (a) What is natural selection? (2mks)
- (b) Describe how natural selection brings about adaptation of a species of a living organism to its environment. (18mks)

- Answer all the questions in the spaces provided.

FOR EXAMINER'S USE ONLY

QUESTION	MAXIMUM SCORE	CANDIDATE'S SCORE
1-24	80	

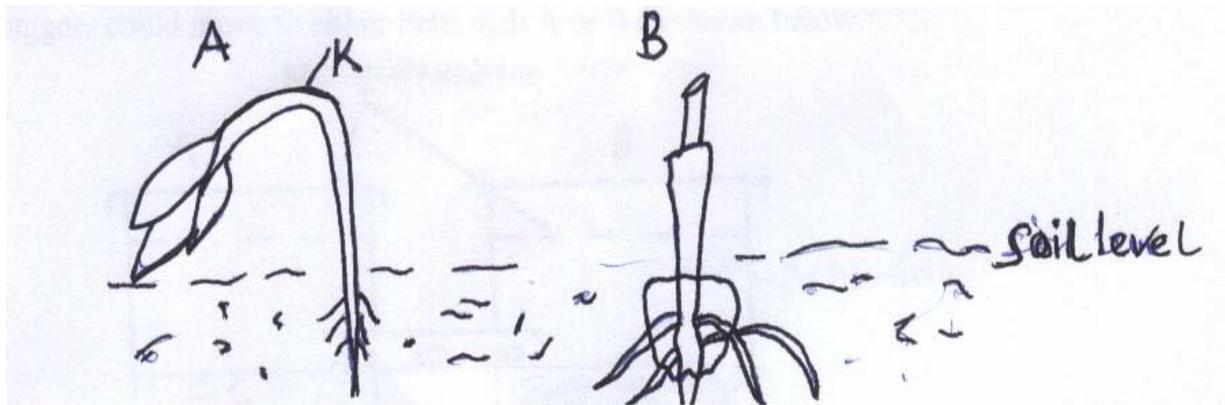

QUESTIONS

1. **State** how each of the following parts of the mammalian ear are adapted to their function.
 - a) Cochlea (2mks)
 - b) Pinna (2mks)
2. **Give two** ways in which endotherms lose heat to the external environment. (2mks)
3. **What** is natural selection? (3mks)
4. **State three** evidences that support the theory of organic evolution. (3mks)
5. The table below shows description of sizes of glomeruli and renal tubules of two animals, which are living in different environments.

	Animal x	Animal y
Glomeruli	Large and few	Small and many
Renal tubules	Short	Long

 - a) **Name** the likely environment in which each animal lives. (2mks)
 - b) **Suggest** the main nitrogenous waste produced by animal Y (1mk)
6. A cell was found to have the following under a light microscope.
Cell membrane, irregular in shape and very small vacuoles.
Identify the type of cell above. (1mk)
7. (a) **State** what would happen to a cell if its nucleus was removed. (1mk)
Reason
 - (b) **Give** the function of nucleolus. (1mk)
8. (a) **Name** the products of the light reaction stage. (2mks)
 - (b) **State** the site where the following stage of photosynthesis takes place. (2mks)
 - Dark stage
 - Light stage
9. (a) **Name two** nutrients that do not require digestion before they are absorbed. 2mks)
 - (b) **What** is assimilation? (1mk)
10. (a) **Give** a reason why the left ventricle muscles are thicker than the right ventricle muscles. (1mk)
 - (b) **State** the form in which carbon (IV) oxide is transported in the blood. (2mks)

11. The diagrams below represent a stage of growth in two different seeds.

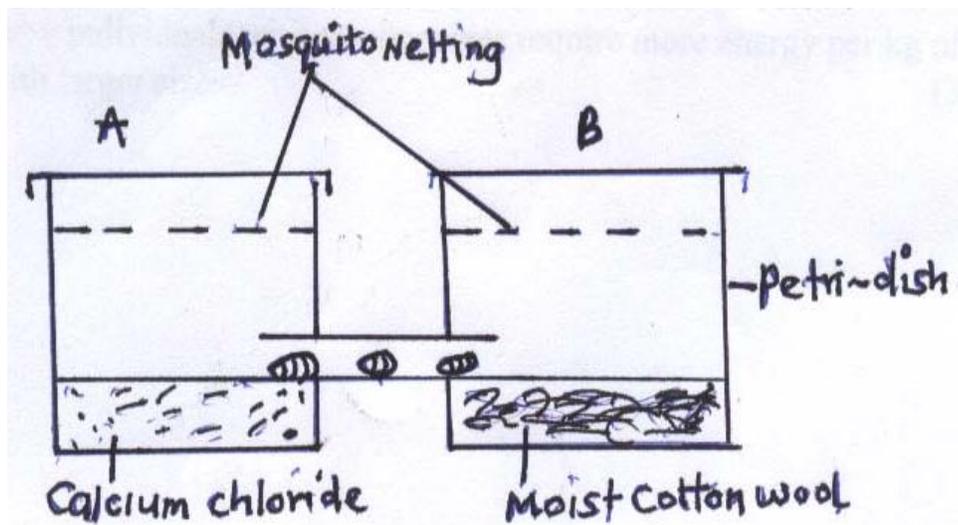

- (a) **Identify** the type of germination exhibited by seedlings A and B and give a reason for each identity
- A
Reason
- B
Reason
- (b) **State** the function of the part labeled K. (1mk)

8. **Explain** how the following adaptations reduce transpiration in xerophytes

- (a) Sunken stomata (2mks)
- (b) Thick waxy cuticle (1mk)

9. The following experiment was set up in a chamber made from two connected Petri dishes. Housefly maggots were introduced at the centre of the chamber, so the maggots could move to either Petri dish A or B as shown below.

- (a) **Name** the type of response being investigated in the set up. (1mk)
- (b) **State** the survival value of the response named in (a) above. (1mk)

- (c) **Give** the role of calcium chloride in the experiment above. (1mk)
10. (a) **What** is sex linkage? (2mks)
 (b) **Name two** sex-linked characteristics in humans. (2mks)
11. **Name** the mechanisms that hinder self —fertilization in flowering plants. (3mks)
12. **Explain** why individuals with smaller sizes require more energy per kg of body weight than those with larger sizes? (3mks)
13. **State** the importance of placenta and amniotic fluid during pregnancy.
 -Placenta (2mks)
 -Amniotic fluid (1mk)
14. **Distinguish** between the two patterns of evolution:
 (a) Divergent and convergent evolution. (2mks)
 (b) **Why** was Lamarks theory of evolution rejected? (2mks)
15. **Name** the meristematic tissues responsible for:
 (a) Primary growth (1mk)
 (b) Secondary growth in plants (1mk)
16. The diagram below represents an organ from a bony fish, **study** the diagram and answer the questions that follow.

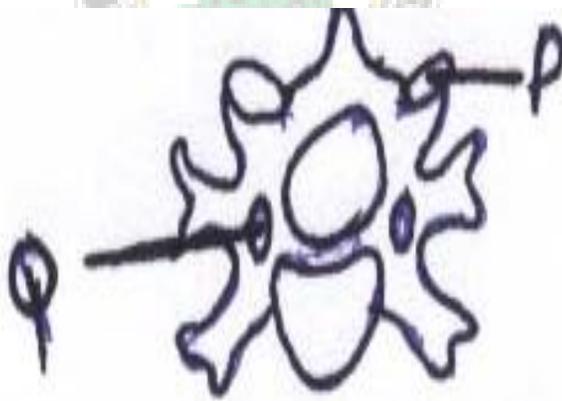

- (a) **State** the functions of each of the following A and B
 (b) **How** is the structure labeled C adapted to its function? (1mk)
17. **Give** the functions of the following parts of a light microscope (2mks)
 (i) Objective lens
 (ii) Condenser

18. During a strenuous exercise, the chemical process represented by the equation below takes place in human muscles.

Substance x

- (a) **Name** the process represented above (1mk)
- (b) **What** is glycolysis? (1mk)
19. During estimation of cell sizes using a light microscope, a student found out the diameter field of view to be 2.7mm and diameter of field of view had 9 cells. The magnification was 50.
- Calculate** the actual length of one cell in microns (3mks)
20. **State** the functions of the following fins of a bony fish (2mks)
- (i) Dorsal fin (2mks)
- (ii) Pelvic and pectoral fins (2mks)
21. The diagram below represents the anterior view of a vertebra study it and answer the questions that follow

- (a) (i) **Name** the identity of the vertebra (1mk)
- Identity
- (ii) **State** the function of each of the following structures P and Q (2mks)
22. (a) **What** is transpiration? (1mk)
23. (b) **Give** the importance of transpiration in green plants. (2mks)
24. **Distinguish** between habitat and ecological niche.

	5	8	
B	6	20	
	7	20	
	8	20	
	TOTAL	80	

SECTION A: (40MARKS)

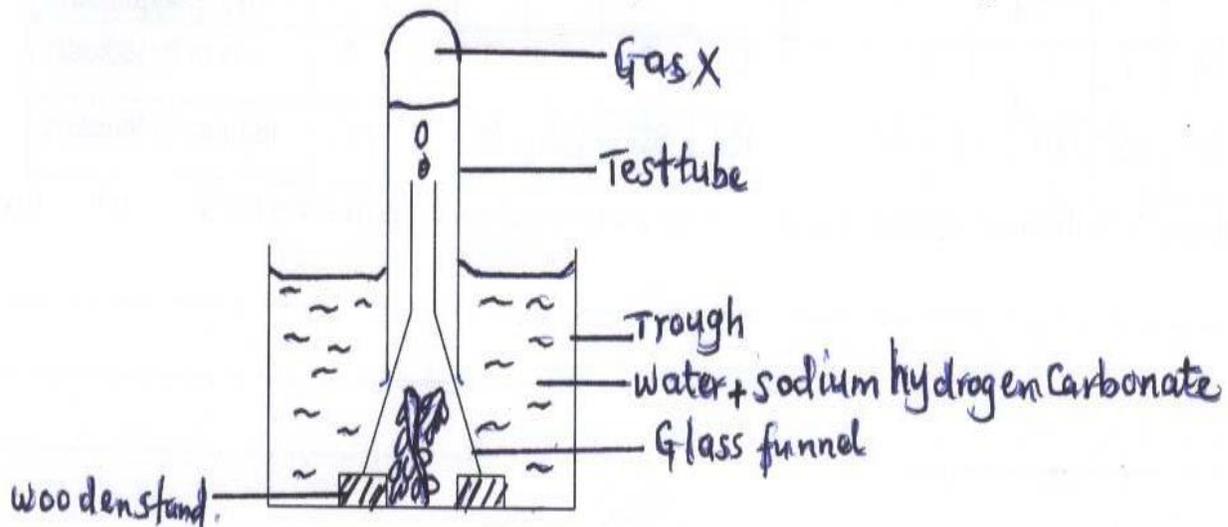

SECTION A: (40 MARKS)

1. In a family with four children, the father had blood group A while the mother had blood group B. One of the children had blood group O.
 - (a) (i) **What** were the genotypes of the parents? (1mk)
 -Mother
 -Father
 - (ii) What was the genotype of the child with blood group O? (1mk)
 - (b) **Work out** the genotypes of the other children.
 - (c) **Which** child can receive blood from any member of the family? (1mk)
 - (d) **State** the percentage of children who can donate blood at all blood groups. (1mk)
2.
 - (a) **What** is active transport? (1mk)
 - (b) **State three** factors that increase the rate of active transport. (3mks)
 - (c) **Give four** roles of active transport in living organisms. (4mks)
3. The diagram below represents one of the joints in the mammalian skeleton.

- (a) **Name** the type of joint shown in the diagram.
- (b) **Name** the parts labeled Z and U.
- (c) **Name two** parts of the body where this type of joint is found. (2mks)
- (d) **State** the functions of the fluid found in W. (2mks)
- (e) **Name** the type of muscles found in the gut. (1mk)

4. (a) **What** is accommodation? (1mk)
- (b) **Describe** the sequence of events that occur in the eye for one to be able to see clearly
- (i) a distant object (4mks)
- (ii) if one moved from a dim lit room to bright light. (3mks)
5. An experiment was set up to investigate a certain process as shown in the diagram below.

The set up was left in bright sunlight for 4 hours.

- (a) **State** the aim of the experiment. (1mk)
- (b) Name X and Y. (2mks)
- (c) Other than sunlight, **name three** factors that would affect the experiment.
- d) **State** how the identity of X could be confirmed. (1mk)
- (e) **Explain** why only submerged water plants are used in this experiment. (1mk)
6. In an ecological study, a grass hopper population and that of crows was estimated in a certain grassland area over a period of one year. The results are as shown in the table below.

Month	J	F	M	A	M	J	J	A	S	O	N	D
Number of adult grasshoppers $\times 10^2$	90	20	11	25	2500	1652	120	15	10	35	192	456
Number of crows	4	2	0	1	8	22	7	2	1	1	5	15
Amount of rainfall	20	0	55	350	520	350	12	10	25	190	256	350

- (i) **What** is the relationship between the rainfall and grasshopper population? (1mk)

(ii) (a) **Account** for the relationship stated in a (i) above. (3mks)

(b) **Explain** the relationship between the grasshopper population and that of the crows. (3mks)

(c) If the data was used in the construction of pyramid of numbers, **what** would be the trophic level of; (3mks)

- i. Grasshopper
- ii. Crows
- iii. The grass in the study area

(d) If the area studied was one square kilometer, **state**;

(i) One method that could have been used to estimate the crow population. (1mk)

(ii) One method that could have been used to estimate the grasshopper population. (1mk)

(e) **Suggest** what would happen if a predator for grasshoppers entered the study area. (2mks)

(f) **What** is meant by the term carrying capacity? (1mk)

(g) Why would the carrying capacity of wild animals in woodland grassland be higher than that of cattle? (2mks)

(h) What is an ecosystem? (3mks)

7. **Describe** the role of the liver in homeostasis. (20mks)

8. (a) **State three** reasons why transport is necessary in animals. (3mks)

(b) **Describe** how the mammalian heart is adapted to its function. (17mks)

- Sign and write the date of the examination in the spaces provided above.
- Answer all the questions in the spaces provided.

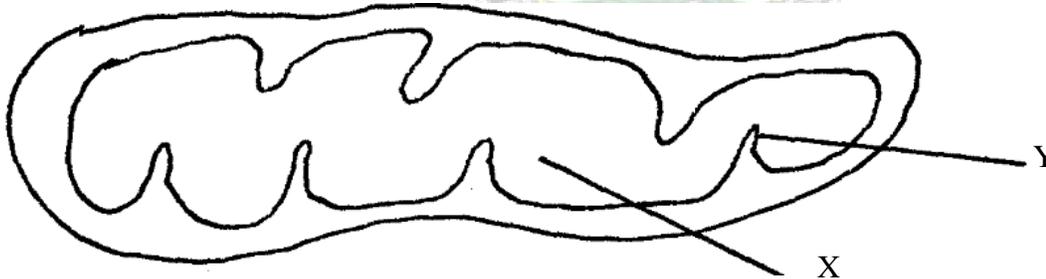

FOR EXAMINER'S USE ONLY

QUESTION	MAXIMUM SCORE	CANDIDATE'S SCORE
1-31	80	

QUESTIONS

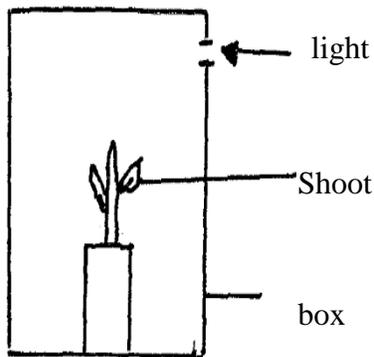

Answer all questions in the spaces provided.

1. Name **one** of the end products of the dark reaction in photosynthesis (1mk)
2. Give **two** reasons why higher animals need an internal transport system (2mks)
3. a) Explain why a person discharges urine more frequently when environmental temperatures are low than when they are high. (2mks)
 b) Name the nitrogenous waster product excreted by a fresh water fish. (1mk)
4. Why is it important to use dry mass in ecological studies and not wet mass (2mks)
5. Identify the agent of dispersal of the following: (2mks)
 - i) Fruits which split open along sutures when dry, hauling their seeds away from the parent plant.
 - ii) Light seeds with hairy extensions
6. Name the **three** main sites in plants through which gaseous exchange takes place (3mks)
7. Liver damage leads to impaired digestion of fats. Explain this statement. (2mks)
8. The diagram below represents an organelle involved in aerobic respiration.

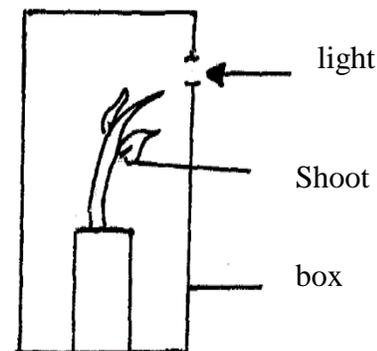

- a) Identify the organelle (1mk)
- b) Name the parts labeled X and Y. (2mks)
9. Explain how the xylem vessels are adapted to their function. (3mks)
10. In cattle the gene for red hair (designated R) and that of white hair (designated W) are co-dominant. When a red haired bull was mated with a white haired heifer, a roan calf was obtained in F1.
 - i) Give the genotypes of the F1 offspring. (1mk)
 - ii) Work out the phenotypic ration when the F1 are selfed. (3mks)

11. State the function of the following in reproduction. (3mks)
- Placenta
 - Acrosome
 - Follicle stimulating hormone
12. State **three** evidences of organic evolution. (3mks)
13. In what form is oxygen transported from lungs to the tissues? (1mk)
14. The diagrams below show an experiment set up using growing bean seedlings. The bean seedlings were enclosed in a dark box with a hole on one side as shown.

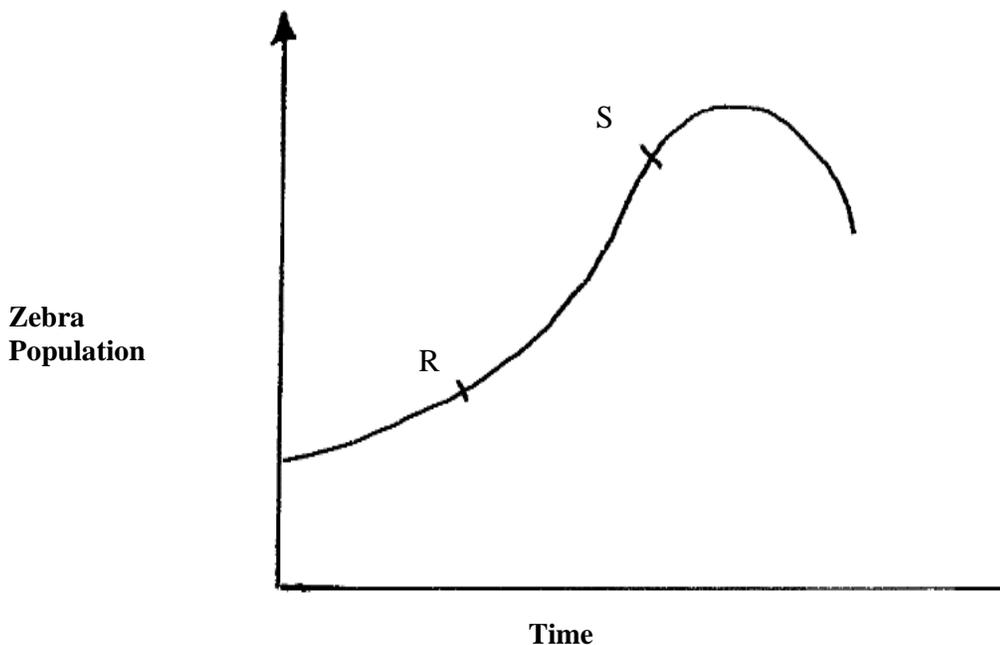

At beginning

After four days of growth

- What type of response does the shoot above show? (1mk)
 - Account for the shape of the bean shoot after four days of growth. (3mks)
15. Explain why several lateral buds sprout when a terminal bud in a young tree is removed. (3mks)
16. State **three** factors that affect the rate of diffusion. (3mks)
17. Explain how the biceps and triceps muscles bring about the movement at the hinge joint of the elbow in man. (3mks)
18. Name **one** mechanism that hinders self pollination in flowering plants. (1mk)
19. In what ways are the gill filaments of fish adapted to their function? (3mks)
20. State the function of the phloem tissue in plants (1mk)
- 21.a) In an experiment, it was found that when maggots are exposed to light, they move to the dark areas.
- Name the type of response exhibited by the maggots. (1mk)
 - State the survival value of the response in (a) (i) above. (1mk)
- b) During a road accident, an accident victim suffered head injury and consequently lost memory. Name the part of the brain that was damaged. (1mk)

22. a) What is meant by oxygen debt. (2mks)
 b) State one factor that affects basal metabolic rate. (1mk)
23. Explain what happens to excess glucose in the body. (3mks)
24. a) Name the hard outer covering of the members of the phylum arthropoda. (1mk)
 b) State **three** roles played by the structure named in (a) above. (3mks)
 c) State **one** other characteristic of the phylum arthropoda. (1mk)
25. Name **one** sex-linked trait in humans. (1mk)
26. The graph below represents a population growth curve of zebras in a grassland ecosystem over a period of time.

- a) Account for the change in zebra population between points R and S on the growth curve above (3mks)
- b) Name the most suitable method used in estimating the zebra population. (1mk)
27. Distinguish between convergent and divergent evolution. (2mks)
28. Explain how temperature affects the rate of photosynthesis. (3mks)
29. Name **two** mechanical tissues which provide support in woody plants. (2mks)
30. State one role of hydrochloric acid secreted by the stomach wall. (1mk)
31. Explain what would happen to the red blood cells when they are placed in hypotonic solution. (3mks)

- This paper consists of **TWO** sections A and B
- Answer **ALL** questions in section A, In section B answer question 6 (**compulsory**) and either question 7 or 8 in the spaces provided after question 8.

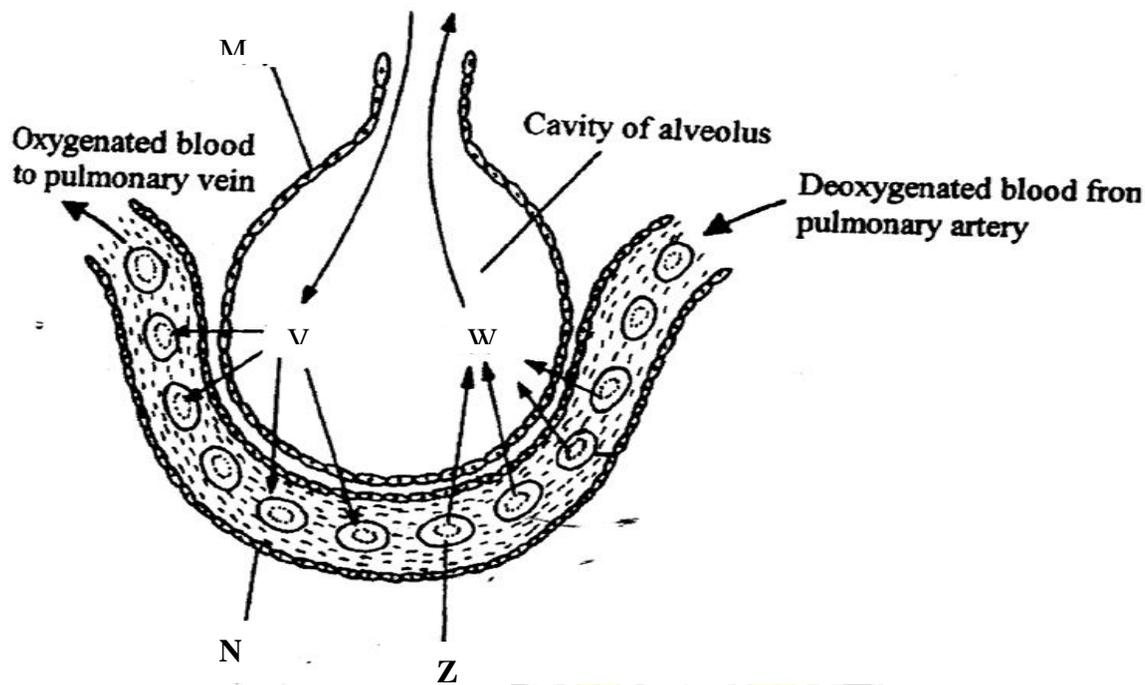

For Examiner's Use Only

SECTION	QUESTION	MAX SCORE	SCORE
A	1	8	
	2	8	
	3	8	
	4	8	
	5	8	
B	6	20	
	7	20	
	8	20	
	TOTAL	80	

SECTION A: (40MARKS)

Answer all the questions in this section in the spaces provided

1. The diagram below illustrates the mechanism of gaseous exchange in mammalian lungs.

- a) Name the tissues labeled M and N (2mks)
- b) Name the gases labeled V and W (2mks)
- c) Name the cell labeled Z (1mk)
- d) State **three** adaptations of alveolus to its function. (3mks)

2. John ate rice and beans for breakfast.

a) State the physical and chemical processes that occurred in the mouth cavity.

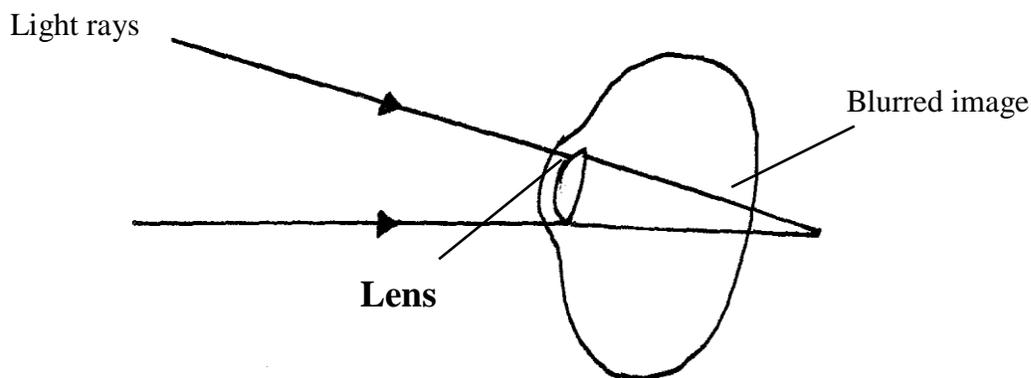

Physical (1mk)

Chemical ... (1mk)

- b) Name the digestive juices that will be released into (3mks)
 - i) The mouth cavity
 - ii) The stomach.
 - iii) The duodenum
- c) Explain how the ileum is adapted to its functions (3mks)

3. Form three students in Geteri secondary were estimating the number of tsetse flies in a small bush near the school. At first they caught 400 tsetse flies, marked and released them. After five days, they caught 500 tsetse flies of which 80 had been marked.
- a) i) Calculate the tsetse flies population in the bush. (3mks)
- ii) State the method used in estimating the population of tsetse flies. (1mk)
- b) State two abiotic and two biotic factors that influence tsetse fly population in a bush.
- i) Abiotic factors (2mks)
- ii) biotic factors (2mks)

4. a) The diagram below shows a defect in a human eye.

- i) Name the defect. (1mk)
- ii) State what brings about the defect in (a)(i) above. (1mk)
- iii) State how the defect can be corrected (1mk)
- b) Explain the changes in the eye during vision in bright light. (3mks)
- c) State the functions of the mammalian ear. (2mks)
5. In a certain variety of tomato, a recessive mutant gene which is responsible for chlorophyll synthesis causes the leaves of the plant to be white when present in homozygous condition. This kind of plant dies soon after germination. In the heterozygous state, the mutant produces a plant with variegated leaves which normally completes its life cycle.
- i) Suggest why the homozygous recessive plant is only able to survive germination but not to complete its life cycle thereafter. (3mks)
- ii) Work out the phenotypic ratio of the offspring's that would be produced as a result of self pollination of the plants with variegated leaves. (5mks)

SECTION B: (40MARKS)

Answer question 6 compulsory in the spaces provided and either question 7 or 8 in the spaces provided after question 8.

6. An experiment was carried out whereby three healthy rats were fed on equal amounts of glucose. After half an hour, the glucose concentration per ml. of blood was measured at 15 minutes intervals for three hours. The following results were obtained.

Glucose conc. mg/ml Rats	0 min	15 min	30 min	45 min	60 min	75 min	90 min
A	0.800	0.774	0.715	0.680	0.650	0.595	0.555
B	0.745	0.695	0.695	0.660	0.635	0.600	0.545
C	0.795	0.695	0.665	0.635	0.590	0.550	0.495
Mean	0.780	0.720	0.691	-	0.625	-	0.532

- a) i) Calculate the mean concentration of glucose in mg per ml of blood at 45 and 75 minutes. Record your answer on the table. **(2mks)**
- ii) On the graph paper provided, plot a graph of the mean glucose concentration against time. **(6mks)**
- iii) What was the mean glucose concentration in the blood after 37.5 minutes? **(1mk)**
- iv) Give a reason why it was necessary to use three rats in the experiment instead of one. **(1mk)**
- v) Why was the initial concentration of glucose in the rats not the same? **(2mks)**
- vi) Account for the difference in mean glucose concentration during the period. **(3mks)**
- b) Give two reasons why glucose is the main respiratory substrate. **(2mks)**
- c) Give three ways in which glucose is assimilated in the body. **(3mks)**
7. Describe how the mammalian heart is structurally adapted to its functions. **(20mks)**
8. Describe the events that take place from the time a pollen grain lands on the stigma of the flower up to the time the seeds form. **(20mks)**

1-29	80	

QUESTIONS

- 1 Define;
- a) Inter-specific competition (1mk)
- b) Intra-specific competition (1mk)

2. The diagram below is of a stage in cell division

With a reason identify the stage. (2mks)

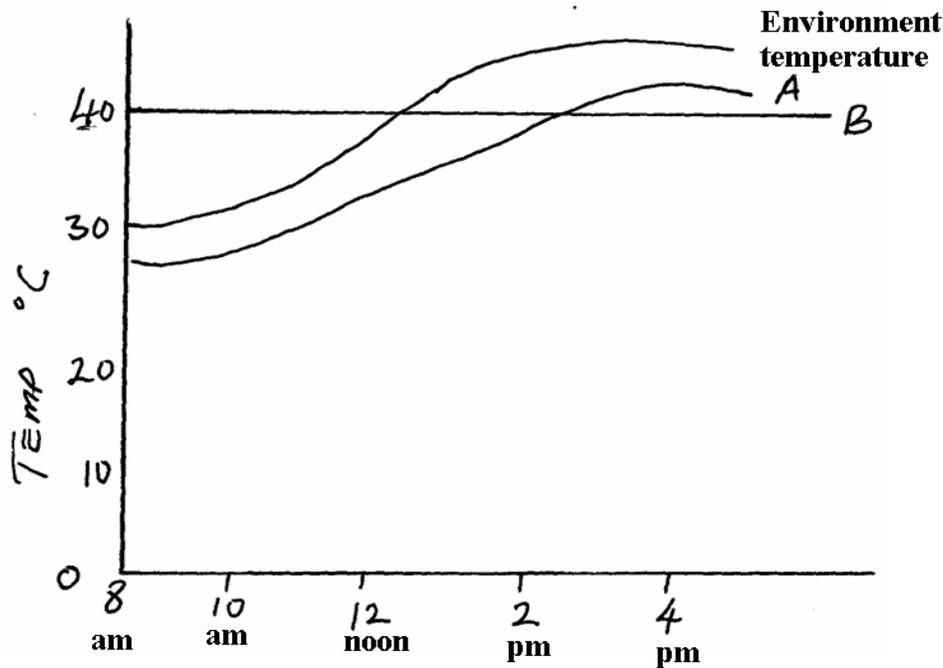

Stage

Reason

3. Name two mutagenic agents. (2mks)
4. The scientific name of the housefly is *Musca domestica*. Classify the fly into; (2mk)
- i) Genus
- ii) Species
5. Cyanide is classified as one of the non-competitive inhibitors of enzymes. What is the meaning of the term non-competitive inhibitor? (2mks)
6. Name two Vitamins of which their absence in the diet may cause a dental disease called gingivitis (2mks)
7. State three factors that maintain the transpiration stream. (3mks)
8. State the economic importance of each of the following plant excretory products.
- i) Cocaine (1mk)
- ii) Caffeine (1mk)
- iii) Nicotine (1mk)
9. a) Why is Lamarck's theory on mechanism of evolution not scientifically acceptable? (1mk)
- b) What name is given to;

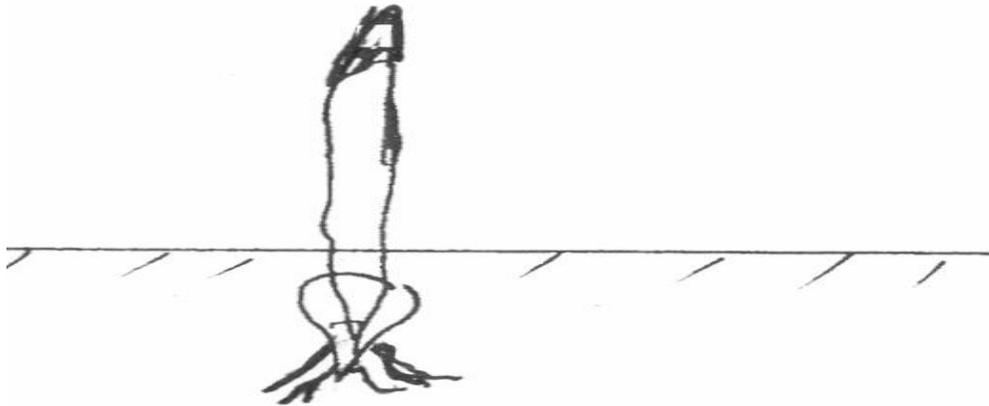

- i) Structures in animals that have become reduced in size until they are functionless (1mk)
- ii) Evolution of structures that have undergone modification to adapt the organism to similar ecological niches. (1mk)

10. The body temperatures of two animals A and B varied as below with environmental Temperature

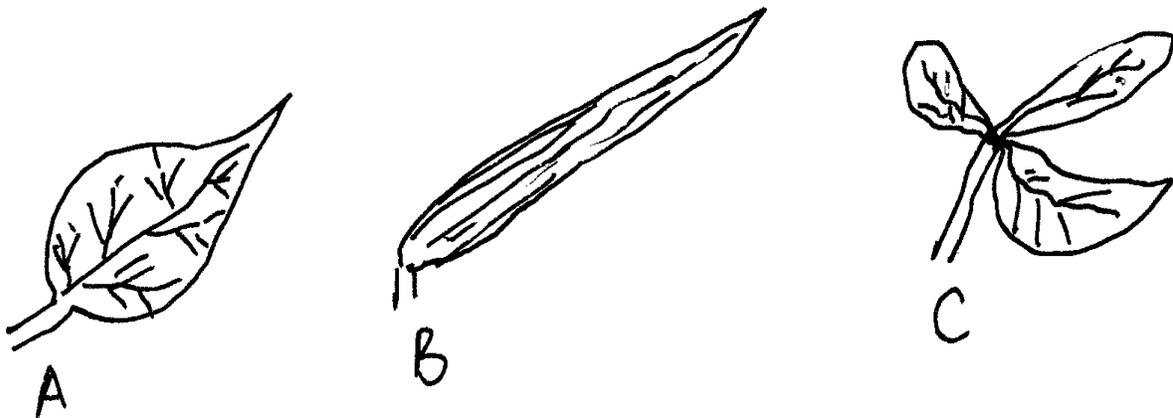

- a) Which of the animals is;
 - i) Endothermic (1mk)
 - ii) Ectothermic (1mk)
- b) With a reason, state which of the animals is likely to be widely distributed (2mks)
- 11. a) State a structural difference between a sensory and motor neurone (2mks)
- b) What is a reflex arc? (2mks)
- 12. Identify the type of gene mutations represented by the following pairs of words.
 - i) Shirt instead of skirt (1mk)
 - ii) Hopping instead of shopping (1mk)
 - iii) Eat instead of tea (1mk)
- 13. State three adaptations of halophytes to their habitat (3mks)

14. State three roles of oestrogen during the menstrual cycle (3mks)
15. A form IV student observed a seedling germinate as below

With a reason identify the type of germination above. (2mks)

16. A man of blood group heterozygous **A** married a woman of heterozygous **B**; work out the blood groups of their children (3mks)
17. a) How is the stigma of a wind pollinated flower adapted to its function? (1mk)
 b) Define the term double fertilization in plants? (2mks)
18. State three characteristics of cells at the zone of cell division in an apical meristem (3mks)
19. Explain the importance of the label "CFC FREE" on modern refrigerators (3mks)
20. Name three biotic factors of an ecosystem (3mks)
21. Below are diagrams of three leaves A, B and C. Construct a two step dichotomous key which can be used to identify each of them. (4mks)

22. A Form IV student observed an heterotrophic organism with jointed appendages and whose body was divided into head, thorax and abdomen. Classify the organism into;

- i) Kingdom (1mk)
- ii) Phylum (1mk)
- iii) Class (1mk)
23. Define;
- i) Pulmonary circulation (1mk)
- ii) Systemic circulation (1mk)
24. Name three diseases against which children are immunized (3mks)
25. Name the site for gaseous exchange in the following animals
- i) Insects (1mk)
- ii) Fish (1mk)
- iii) Mammals (1mk)
26. Students estimating the number of grasshoppers in a field captured 72 grasshoppers which they marked and released. After two days the students captured 90 grasshoppers of which 8 were marked.
- a) Why did the second capture take place after two days? (1mk)
- b) Calculate the total number of grasshopper in the field (3mks)
27. Name the contractive agent of typhoid and state two symptoms of the disease (3mks)
28. Name two neurotransmitter substances across neurons (2mks)
29. What type of variation is exhibited by the ability of man to roll or not roll the tongue? (1mk)

SECTION A: (40MARKS)

Answer All questions in the spaces provided)

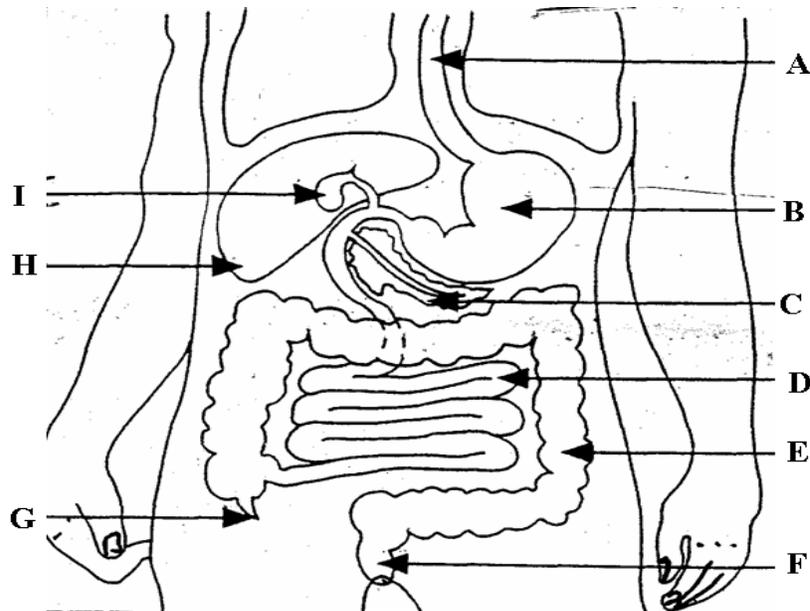

1. A group of students set-up an experiment to investigate a certain physiological process. The set up was as shown in the figure below.

After sometime the student observed that a sugar solution was formed and its level rose in the cavity where sugar crystals were placed.

- a) What physiological process was being investigated? **(1mk)**
- b) Account for the formation of sugar solution and its rise in level. **(3mks)**
- c) Suggest the result the students would obtain if they repeated the experiment using a boiled pawpaw. Give reasons **(2mks)**
- e) State two importance of the physiological process named in 1 a) above to plants **(2mks)**
2. In an experiment some germinating seeds were placed in a large airtight flask and left for Four days.
- a) Suggest the expected changes in the composition of gases in the flask on the fifth day. **(2mks)**
- b) Give reasons for your answer a) above. **(1mk)**
- c) Name two factors that cause dormancy in seeds. **(2mks)**
- d) Account for the loss in dry weight of cotyledons in a germinating pea seed. **(2mks)**
- e) Name the hormone that causes moulting in insects. **(1mk)**

3. The diagram below shows part of the human digestive system.

- a) Identify the parts labeled **A**, **C**, **G** and **H** (2mks)
- b) Name one substance absorbed at part labeled **E** (1mk)
- c) State one role of the substance stored in structure labeled **I** in digestion. (1mk)
- d) Explain three ways by which structure labeled **D** is adapted for absorption of the products of digestion (3mks)
- e) State role of hydrochloric acid secreted by the walls of structure labeled **B**. (1mk)

4. In a family with two children, the mother had blood group **A** while the father had blood group **B**. One of their children had blood group **AB**

- a) i) What are the genotypes of the parents? (2mks)

Mother	Father
--------	--------
- ii) What was the genotype of the child with blood group **AB**? (1mk)
- b) Determine the possible genotypes of the other children (4mks)
- c) What is the advantage of having blood group **AB**? (1mk)

5. In an investigation to compare the basal metabolic rate of some animals, the amount of Oxygen absorbed per unit body weight in a given time was determined. The results are as

indicated in the table below.

Animal	Body weight (kg)	Volume of oxygen absorbed (gm/hr)
Buffalo	4,500	53
Baboon	70	190
Dog	12	280
Rat	0.1	870
Mouse	0.025	1,580

- a) What is the meaning of the term basal metabolic rate? (1mk)
- b) i) Compare the volume of oxygen consumed between the buffalo and the mouse (2mks)
- ii) Account for the comparison in b i) above
 buffalo (2mks)
 Mouse (2mks)
- c) State one other factors that affects basal metabolic rate of an organism. (1mk)

SECTION B. (40 MARKS)

Answer question 6 (compulsory) and either question 7 or 8 in the spaces provided after question 8.

6. Ten young rats were placed in a cage. The amount of food available to the mice each day was kept constant. The results obtained were as shown in the table below

Time in months	0	2	4	6	8	10	12	14	16	18
Number of rats	10	10	55	105	300	445	440	180	135	150

- a) Using a suitable scale, plot a graph of a number of rats against tim (6mks)
- b) Discuss the evidences of organic evolution ith reference to the graph,
 account for the changes in rat population between
- i) 0 to 2 months (1mk)
- ii) 2 to 10 months (2mks)
- iii) 10 to 12 months (2mks)
- iv) 12 to 16 months (2mks)

- c) i) Between which two months was the population change greatest. **(1mk)**
 ii) Calculate the rate of population change over the period you have given in a) above **(2mks)**
- d) Briefly describe how you would use the capture – recapture method to estimate the population of grasshoppers. **(4mks)**
7. Discuss the adaptations of the mammalian skin to its function. **(20mks)**
8. a) Explain the meaning of each of the following as used in evolution.
 i) Natural selection **(4mks)**
 ii) Struggle for existence **(16mks)**

Instructions to Candidates.

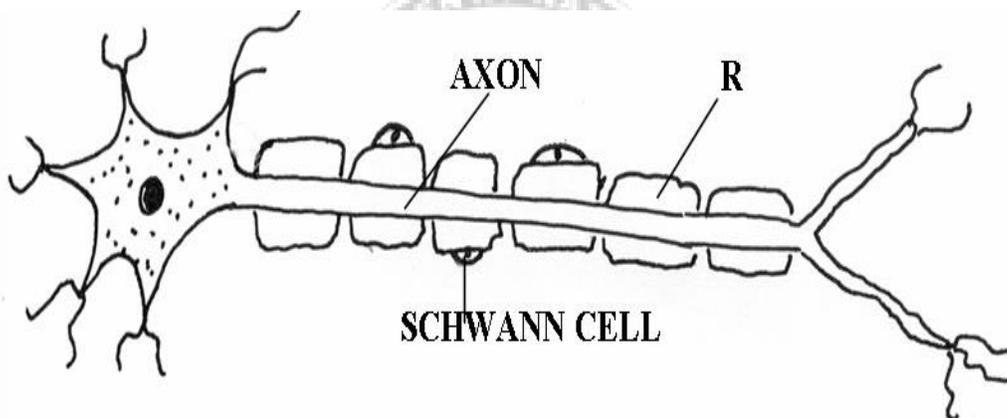

- Write your name, Index Number and School in the spaces provided above.
- Sign and write the date of the examination in the spaces provided above.
- Answer all the questions in the spaces provided.

FOR EXAMINER'S USE ONLY

QUESTION	MAXIMUM SCORE	CANDIDATE'S SCORE
1-28	80	

QUESTIONS

1. a) State the functions of the following cell organelles. (2mks)
 - i) Ribosomes
 - ii) Lysosomes
- b) Name the only epidermal cell in plants that contain chloroplast. (1mk)
2. a) Name the causative agents of the following diseases. (2mks)
 - i) Amoebic dysentery
 - ii) Tuberculosis
3. a) What is the importance of the counter current flow in the exchange of gases in a fish. (2mks)
- b) State **two** ways in which the tracheoles of an insect are adapted to their functions. (2mks)
- 4 The diagram below shows a type of a neurone.

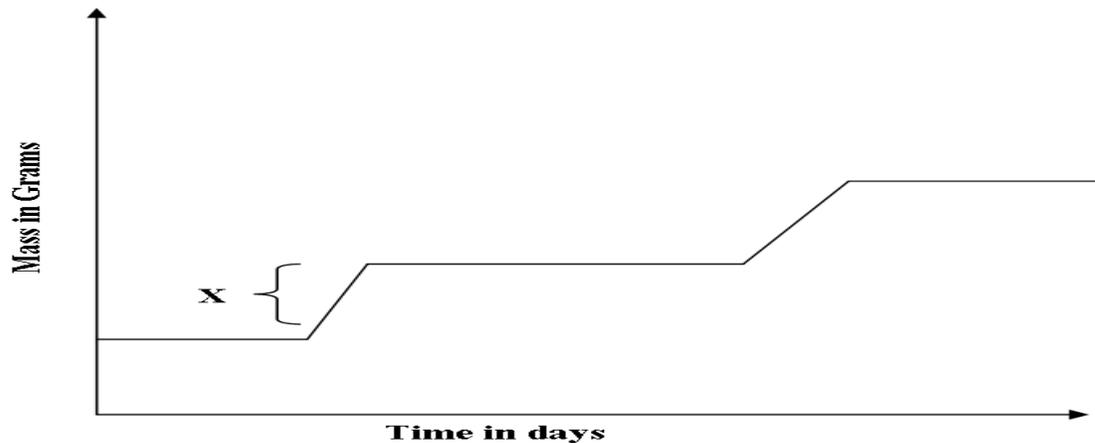

- a) Identify the neurone above. (1mk)
- b) Give a reason for your answer in 4(a) above. (1mk)
- c) State the function of the part labeled R. (1mk)
- d) Use an arrow on the diagram to show the direction of the impulse transmission along the neurone. (1mk)
5. The equation below represents a reaction that occurs during respiration in a cell.

- a) Identify the compound K. (1mk)
- b) State **two** differences between K and ATP. (2mks)
- c) Name the organelle responsible for the production of energy in a cell muscle (1mk)

6. The graph below represents the growth pattern of animals in a certain phylum.

- a) Name the type of growth curve shown above. (1mk)
- b) i) Identify the process represented by x. (1mk)
 ii) Name the hormone responsible for the process in b(i) above.
- c) State the importance of the growth of a pollen tube to a plant. (1mk)

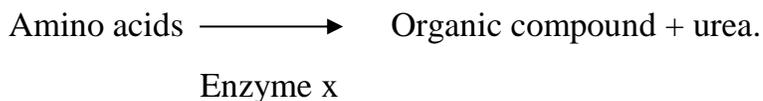

7. State **three** factors that affect absorption of mineral ions by plant roots. (3mks)

8. Explain how crops grown along roads can be a source of lead poisoning to human beings. (2mks)

9. Name the type of responses exhibited by.

- a) Tendrils when they twine on a support object. (1mk)
- b) Butterflies and moths fly into wind currents in order to detect scent of flowers. (1mk)

10. The equation below represents a metabolic process that occurs in the mammalian liver.

- a) Name the process that represents the above equation. (1mk)
 - b) Identify the enzyme represented by x. (1mk)
 - c) What is the importance of the process to the mammal (1mk)
11. A scientist carried out blood sugar test for a given patient at three different times of the day. He obtained the results shown below for glucose and glycogen level.

Time	6 a.m.	1.30 p.m.	4 p.m.
Glucose	90mg	100mg	90mg
Glycogen	20mg	40mg	60mg

Account for:

- a) Presence of glycogen in blood. (2mks)
- b) Rise in glucose and glycogen levels at 1.30p.m (2mks)
12. a) What is the meaning of alterations of generations. (2mks)
- b) Name one plant division which displays alteration of generation. (1mk)
13. Explain why plants growing in low altitude areas grow faster than those in high altitudes. (3mks)
14. a) What is the function of Sodium hydrogen Carbonate that is added to test solution of non-reducing sugar. (1mk)
- b) The equation below represents a process X which is controlled by enzymes .
- $$\begin{array}{ccc}
 C_6 H_{12} O_6 + C_6 H_{12} O_6 & \xrightleftharpoons[R]{X} & C_{12} H_{22} O_{11} + H_2O \\
 \text{Glucose + Fructose} & & \text{Sucrose + Water}
 \end{array}$$
- i) Name the process X and enzyme R
- Process X (1mk)
- Enzyme R (1mk)
15. State **two ways** through which plants eliminate their metabolic wastes from their bodies(2mks)
16. a) What is double fertilization in flowering plants? (1mk)
- b) Name any two types of placentations found in ovaries. (2mks)
17. List down **four** phenotypic characteristics that have been selected for the production of strains suitable for modern agricultural purposes. (4mks)
18. a) Name any **two** accessory glands in the male urinogenital system. (2mks)
- b) What structural modification do human sperm cell have that:
- i) Facilitate energy use. (1mk)
- ii) Facilitate movement. (1mk)
19. Name the type of eye defects that can be corrected by;
- i) Use of bifocal lens (1mk)
- ii) Use of artificial lens (1mk)
- iii) Use of concave lens (1mk)
20. a) The length from the tail tip to the anus of a certain tilapia fish is 10cm. The length from the tail tip to the mouth is 35cm. Calculate the tail power of the fish. (Show all your working). (2mks)

- b) What is the significance of high tail power in fish? (1mk)
21. State the roles of each of the following hormones in the process of reproduction in human male.
- i) Follicle stimulating hormone. (1mk)
- ii) Luteinising hormone. (1mk)
22. List down three differences between the endocrine system and nervous system. (3mks)

Endocrine system	Nervous system
i.	i.
ii	ii
iii	iii

23. Distinguish between the struggle for existence and survival for the fittest as used in the theory of natural selection. (2mks)
24. State **three** structural feature of the placenta which facilitates the diffusion of substance between the maternal and foetal blood. (3mks)
25. Give one functional difference between a tendon and a ligament in a mammal. (1mk)
26. State the functions of the following parts of a light microscope. (2mks)
- i) Diaphragm
- ii) Objective lens
27. Explain how the following adaptations minimizes rate of transpiration.
- i) Sunken falling (2mks)
- ii) Leaf dropping (1mk)
28. State **one** structural difference between mature red blood cells and white blood cells.(1mk)

NAME..... INDEX NO.....

SCHOOL..... SIGN.....

DATE.....

INSTRUCTIONS TO CANDIDATES.

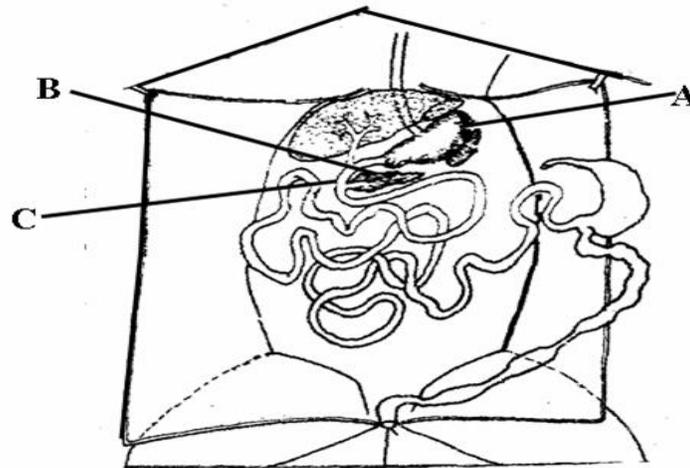

- a) Write your name, Index Number and School in the spaces provided above.
- b) Sign and write the date of the examination in the spaces provided above.
- c) This paper consists of **TWO** sections A and B
- d) Answer **ALL** questions in section A, In section B answer question 6 (**compulsory**) and either question 7 or 8 in the spaces provided after question 8.

For Examiner's Use Only

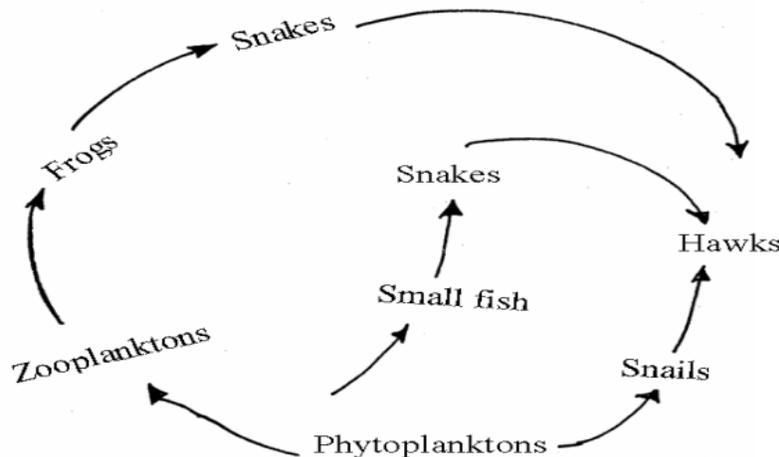

SECTION	QUESTION	MAX SCORE	SCORE
A	1	8	
	2	8	
	3	8	
	4	8	
	5	8	
B	6	20	
	7	20	
	8	20	
	TOTAL	80	

SECTION A: (40MARKS)

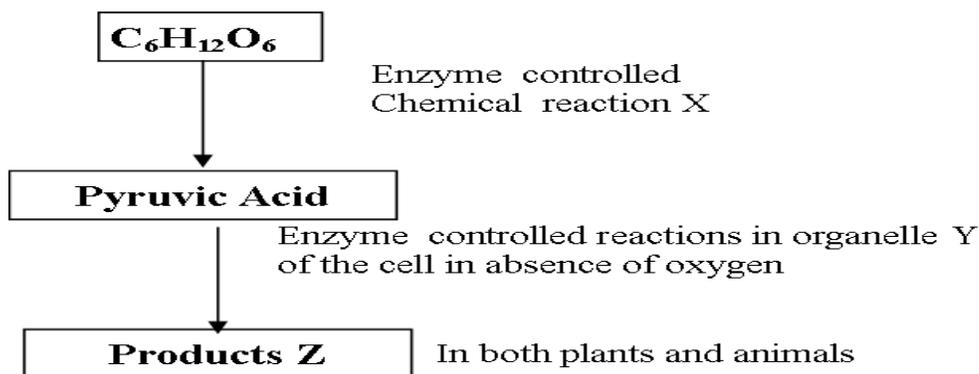

1. The diagram below shows the mammalian digestive system. Study it carefully and answer the questions that follow.

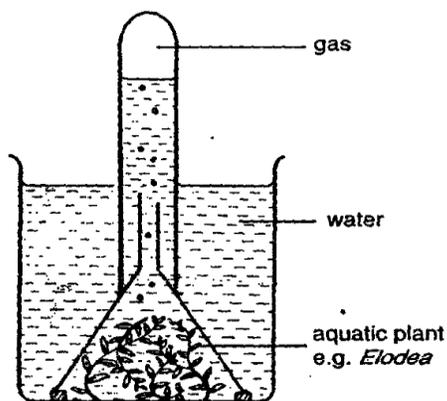

- a) i) Name the parts labeled A and B. (2mks)
 ii) How is the structure labeled A in the diagram adapted to carry out its function? (2mks)
- b) i) Name the hormone secreted by the walls of part labeled C (1mk)
 ii) Explain the role of the hormone in b (i) above in digestion. (3mks)
2. The diagram below represents a feeding relationship in an ecosystem.

- a) Name the type of ecosystem represented by the above food web. (1mk)
- b) Name the organisms in the food web that
 i) Are producers (1mk)
 ii) Occupies the highest trophic level (1mk)
- c) i) Write a food chain that ends with the hawk as quaternary consumer. (1mk)
 ii) State **two** short term effects on the above ecosystem if all the small fish were killed. (2mks)
- d) How does oil spills lead to death of fish. (1mk)
- e) Name **one** other cause of water pollution apart from oil spills. (1mk)
3. Study the flow chart below of a process that takes place in both plants and animals.

- a) Name the above process. (1mk)
 - b) i) In the above process name the chemical reaction represented by X.(1mk)
 - ii) Name the part of the cell where the enzyme controlled reactions in b(i) above takes place. (1mk)
 - c) Name the products Z in
 - i) Plants (1mk)
 - ii) Animals (1mk)
 - d) What would be the fate of pyruvic acid if oxygen supply is availed in the mitochondria of an animal cell (2mks)
 - e) What is meant by the term oxygen debt? (1mk)
4. a) Define multiple allelism and give an example. (2mks)
- b) In Drosophila melanogaster the gene for eye colour is sex linked. The gene for red eye is dominant. A cross was made between a homozygous red eye female and a white eyed male. Workout the phenotypic ration of the F1 generation. (Use R to represent the gene for red eyes.) (4mks)
- c) Suggest two reasons to explain why Drosophila melanogaster is the most preferred organisms for studies in modern genetics. (2mks)
5. An experimental set-up below was placed in the sun for some days. The rate of bubbles given off per unit time, from the cut end of the water plant (Elodea) was measured. The results obtained are shown in the table below.

Results

Day	Daylight condition	Average number of bubbles per minute
1	very cloudy and dull	3
2	less cloudy	8
3	quite sunny	15
4	very bright sunshine	25
5	cloudy and dull	4

- a) i) Name the gas that was given off by the plant. (1mk)
- ii) Name the biological process that the gas in a(i) produces. (1mk)
- b) What conclusion is drawn from the results obtained in this experiment? (1mk)

- c) You are provided with an electric bulb, a metre rule and a light meter. Briefly describe how you would use this experimental set-up in the laboratory to demonstrate the effect of light intensity on the rate photosynthesis (4mks)
- d) Suggest one possible experimental error that may occur in this experiment. (1mk)

SECTION B;(40 MARKS)

Answer question 6 Compulsory and either question 7 and 8

6. An experiment was carried out to investigate the effect of heat on germination of seeds. Ten bags each containing 60 pea seeds were placed in water-bath maintained at 85⁰C. After an interval of two minutes a bag was removed and seeds planted. The number that germinated was recorded. The procedure used for pea seeds was repeated for wattle seeds. The results were tabulated as in the table below.

Time (Minutes)	Number of seeds that germinated	
	Garden pea seeds	Wattle seeds
0 – 2	60	0
2 – 4	60	0
4 – 6	44	1
6 – 8	40	2
8 – 10	36	28
10 – 12	11	36
12 – 14	2	41
14 – 16	1	44
16 – 18	1	47
18 – 20	0	49
20 – 22	0	49

- a) Using a suitable scale and on the same axes, draw graphs of time in hot water against number of seeds that germinated for each plant. (7mks)
 - b) i) After how many minutes would you expect 50% of wattle seeds exposed in hot water to germinate. (1mk)
 ii) What was the minimum number of minutes after exposure of garden pea seeds to hot water was there no germination. (1mk)
 - c) From the graph, which of the **two** types of seeds was more sensitive to heat influence on germination. Why? (1mk)
 - d) Explain why the ability for the:
 - i) Garden pea seeds to germinate declined with the time of exposure to heat (3mks)
 - ii) Wattle seeds to germinate increased with time of exposure to heat. (2mks)
 - e) What results would be expected if the temperature of water was maintained at temperatures.
 - i) Above 85⁰C (1mk)
 - ii) At 5⁰C (1mk)
7. a) Apart from temperature state three internal factors necessary for seed germination. (3mks)
- a) Briefly describe the circulation of blood in a mammalian heart. (6mks)
 - b) Discuss the pumping mechanism of the heart. (14mks)
8. Describe the role played by growth hormones in growth and development in plants. (20mks)
